COMMERCIAL PRESENTATION FOR FOUNDERS & EXECUTIVES

Evolve AI Forward Deployed Engineers Delivery Studio

The complete local-first enterprise AI delivery cockpit. Take a client from discovery to deployed multi-agent architecture in hours — running 100% on your own hardware with verifiable, audit-ready integrity.

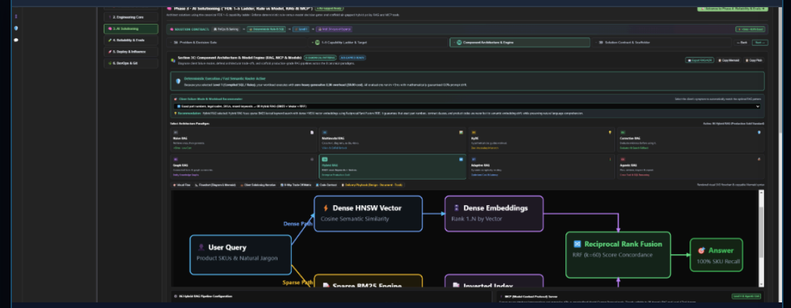

🔒 100% Air-Gapped Local Execution | 🌐 Dual 2D/3D Schema Topology | 🤖 Multi-Agent 4-Way Mesh | ⚖️ Deterministic Decision Gates

2D & 3D SCHEMA TOPOLOGY — PHASE 2

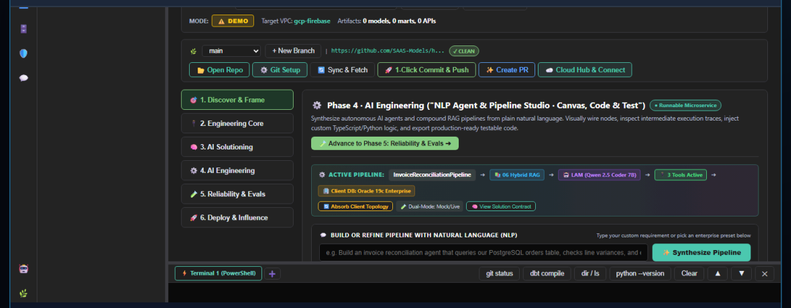

Visual ERD grid & 3D Celestial Cosmos star cluster. Column-to-column bezier PK/FK links with 4% ghost opacity isolation.

HYBRID RAG & CAPABILITY LADDER — PHASE 3

Dense HNSW + Sparse BM25 via Reciprocal Rank Fusion for 100% recall. Rule-vs-model gates and dual MCP scaffolding.

MULTI-AGENT STUDIO & 4-WAY MESH — PHASE 4

App Bus, A2A Peer Mesh, RAG Store, and Client DB with 2PC Write-back. Visual scheduler & live consensus testing.

ENTERPRISE DELIVERY REALITY VS. MARKETING HYPE

Enterprise AI Delivery is Broken — And That is Your Advantage

Most AI consulting engagements stall between proof-of-concept and production because current tooling relies on fragmented cloud APIs, uncontrolled prompt guessing, and manual glue code.

📉 Context Evaporates Across 10 Tools

Engineering teams juggle ERD diagrams, Jupyter notebooks, cloud consoles, Miro boards, and IDEs. Architectural decisions, data types, and security constraints are lost at every handoff, leading to costly scope creep.

Result: 3–6 month delayed delivery cycles & burnt margins.

🔒 Regulated Data Cannot Leave the Firewall

Financial institutions, healthcare providers, defense contractors, and government agencies legally prohibit sending proprietary schemas or data to public cloud LLMs. Vendors requiring public SaaS endpoints are instantly disqualified.

Result: $100B+ regulated market remains locked to cloud AI.

💸 The Token Cost & Hallucination Trap

Teams default to deploying massive language models for deterministic arithmetic and rule-based queries. The result is runaway token bills, unpredictable hallucination risks, and zero SLA guarantees for audit committees.

Result: Failed enterprise pilot sign-offs & audit vetoes.

🚀 The Evolve AI Solution: A Self-Contained Desktop Cockpit

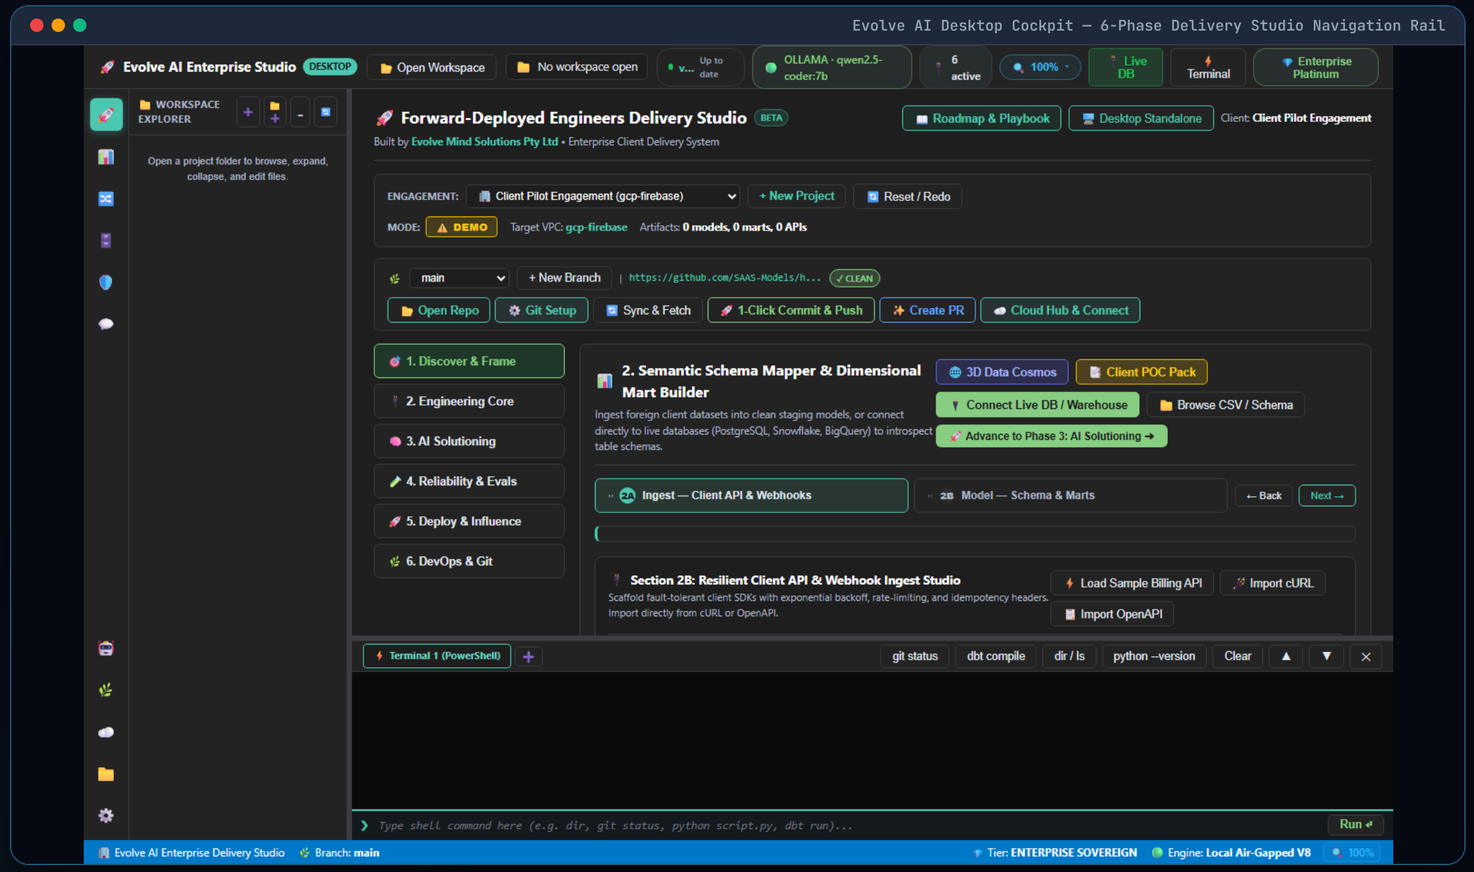

Evolve AI unites client discovery, live data introspection, deterministic decision gates, multi-agent orchestration, and cloud scaffolding into **one unified desktop environment** that runs completely air-gapped on existing hardware.

Commercial Advantage: Win client trust on day one by providing mathematical determinism and complete data sovereignty.

AUDITABLE, REPEATABLE CLIENT ENGAGEMENT RUNBOOK

One Unified Studio Following the Whole Client Engagement

Move seamlessly from boardroom scoping to production-grade deployment within a single cockpit engineered specifically for Forward Deployed Engineering teams.

PHASE 1

Discover & Frame

Define objectives, ROI metrics, compliance bounds, and sign-off gates.

PHASE 2

Engineering Core

Connect live databases, map 2D/3D schemas, and scaffold dimensional marts.

PHASE 3

AI Solutioning

Rule-vs-model gate, 8 RAG patterns, and dual-runtime MCP server scaffolding.

PHASE 4

AI Engineering

2D visual DAG canvas, multi-agent swarms, and live in-studio simulator.

PHASE 5

Evals & Deploy

Empirical latency/token testing, 1-click Terraform, Docker & K8s manifests.

PHASE 6

DevOps & Git

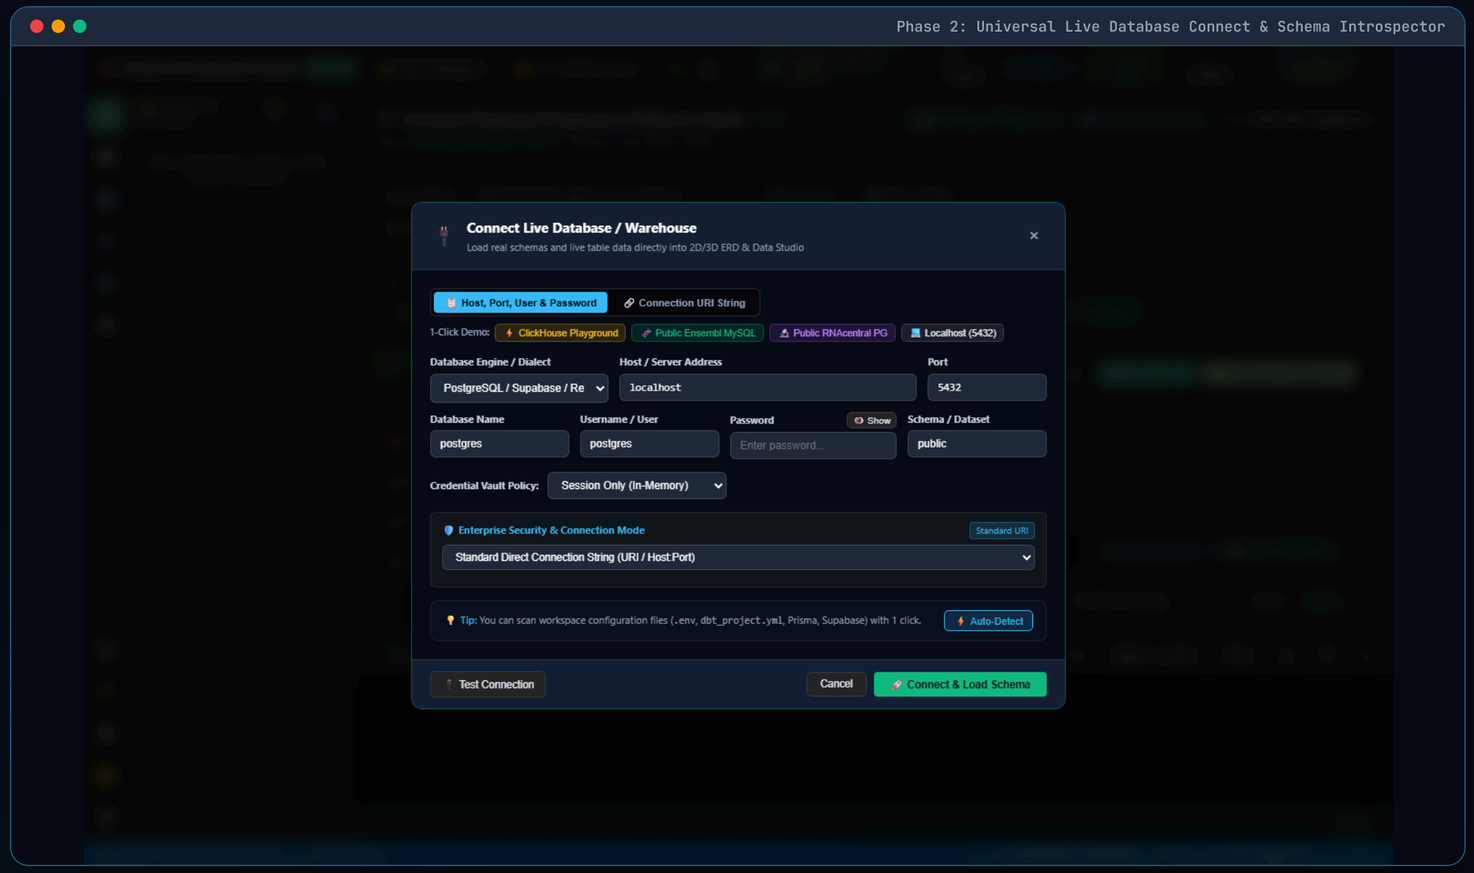

Dedicated Green Leaf pane, 1-click Git wizards, live diffs & AI commit drafting.

Efficiency Multiplier: Eliminates fragmented handoffs, ensuring client requirements remain anchored to code and architecture.

PHASE 2: UNIVERSAL LIVE DATA INTROSPECTION MATRIX

Connect & Introspect Any Enterprise Warehouse in Seconds

Extract live schemas, table geometries, primary/foreign keys, and data samples with zero footprint and zero persistent credential storage.

Universal Enterprise Warehouse Connect

MULTI-DIALECT

Native connection drivers for Snowflake, BigQuery, Databricks, PostgreSQL, Oracle, IBM DB2, Microsoft SQL Server, and SQLite with automated schema harvesting.

Zero-Persistence In-Memory Security

AIR-GAP SAFE

Credentials remain purely in volatile session memory during discovery. Zero credentials or connection strings are serialized to config files or disk.

Instant Dimensional Mart & POC Pack

1-CLICK SIGN-OFF

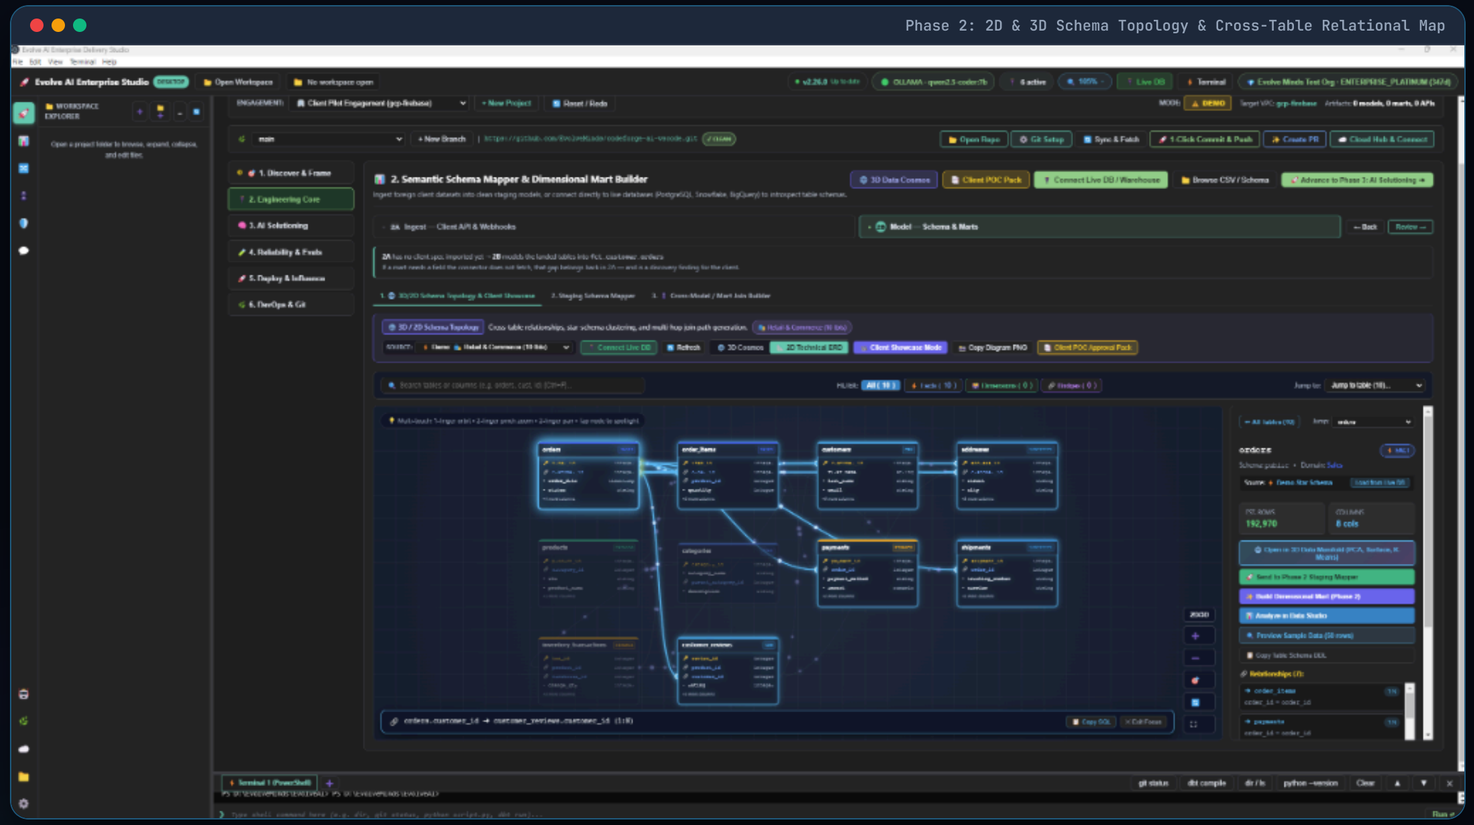

Instantly identifies fact tables, dimension hierarchies, and relational join trees. Generates a client-ready POC Approval Pack in HTML and PDF on day one.

Commercial Impact: Walk into client discovery meetings and produce verified data architectures in under 15 minutes.

CROSS-TABLE TOPOLOGY & CLIENT VISUAL SHOWCASE

Interactive 2D & 3D Schema Topology & Celestial Cosmos

Explore complex enterprise database schemas in interactive 2D ERD and 3D Celestial orbit with column-to-column PK/FK linking and join isolation.

Dual-Mode 2D ERD & 3D Cosmos

2D / 3D DUAL

1-click toggle between a dynamic technical ERD grid and an interactive 3D Celestial star cluster. Auto-fits massive enterprise schemas (265+ tables) with responsive bounding boxes.

Column-to-Column Relational Linking

[PK] → [FK]

Illuminated cubic bezier curves linking exact primary keys to foreign keys with socket pins. Hover within 14px for live join formula tooltips, multi-hop paths, and cardinality metrics.

Table & Link Isolation Mode

4% GHOST OPACITY

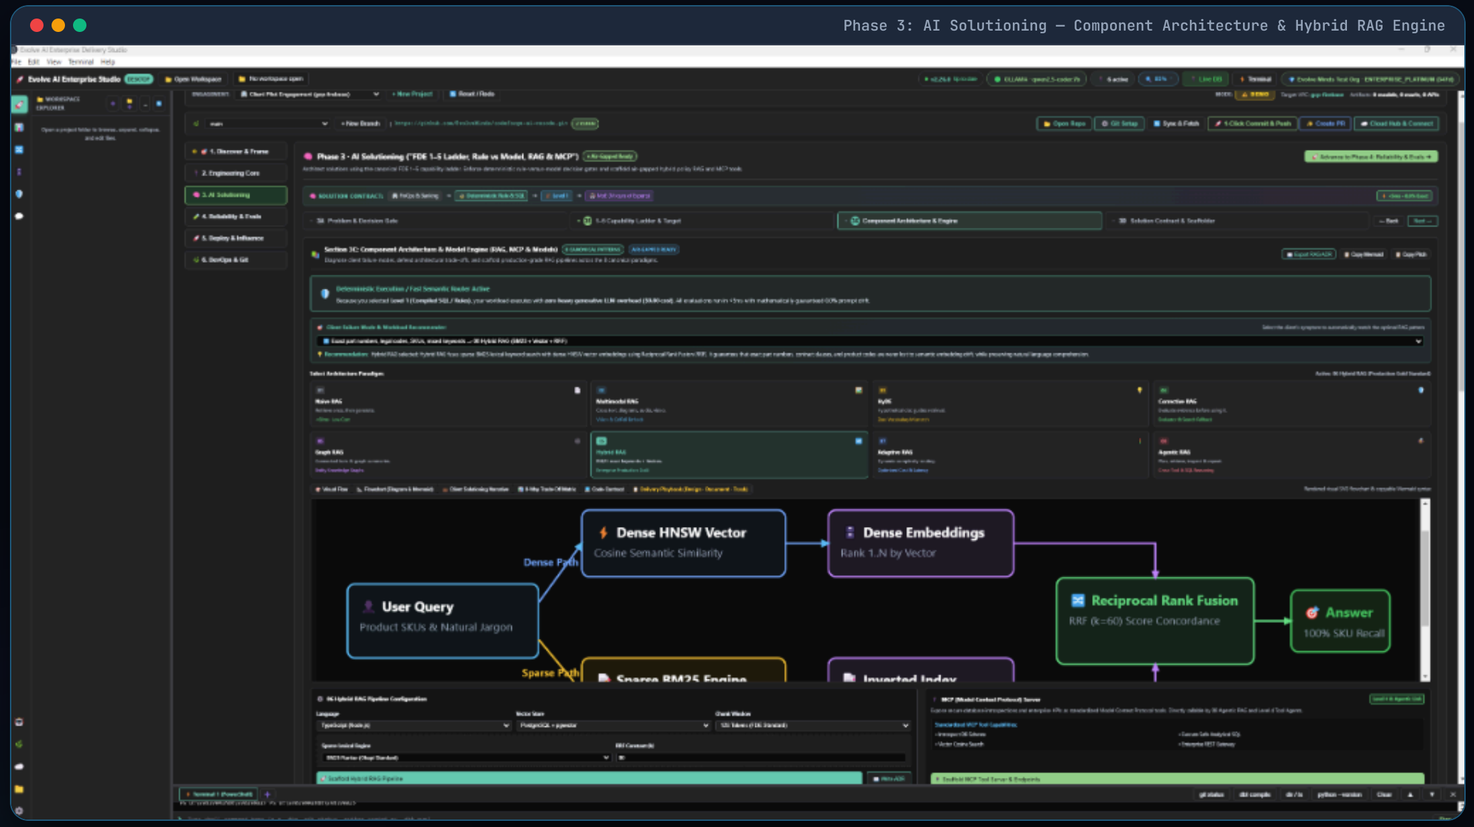

Click any connection line to dim unrelated noise to **4% blueprint ghost opacity**, spotlighting joined transactional entities with glowing halos, animated photon pulses, and instant ANSI SQL generation.

Visual Impact: Walk into client architectural reviews and project crystal-clear data models that establish instant executive authority.

PHASE 3: GOVERNANCE, RAG ARCHITECTURE & CAPABILITY LADDER

AI Solutioning Contract & Hybrid RAG Retrieval Engine

Enforce deterministic rule-first decision gates, architect hybrid RAG pipelines with dense vector and sparse keyword paths, and auto-scaffold MCP tool servers.

Hybrid RAG Visual Flow & Concordance

100% RECALL

Visual pipeline coupling Dense HNSW Vectors (Cosine Semantic Similarity) and Sparse BM25 Engines via Reciprocal Rank Fusion (RRF) for 100% SKU and domain jargon recall.

Rule vs. Model Decision Gate

<5ms • 0% DRIFT

Explicitly verifies "Do We Need AI?" Auto-locks target capability levels (Level 1 deterministic rules to Level 5 autonomous swarms) to eliminate hallucinations and unnecessary API costs.

Dual-Runtime MCP Tool Server

NODE / PYTHON

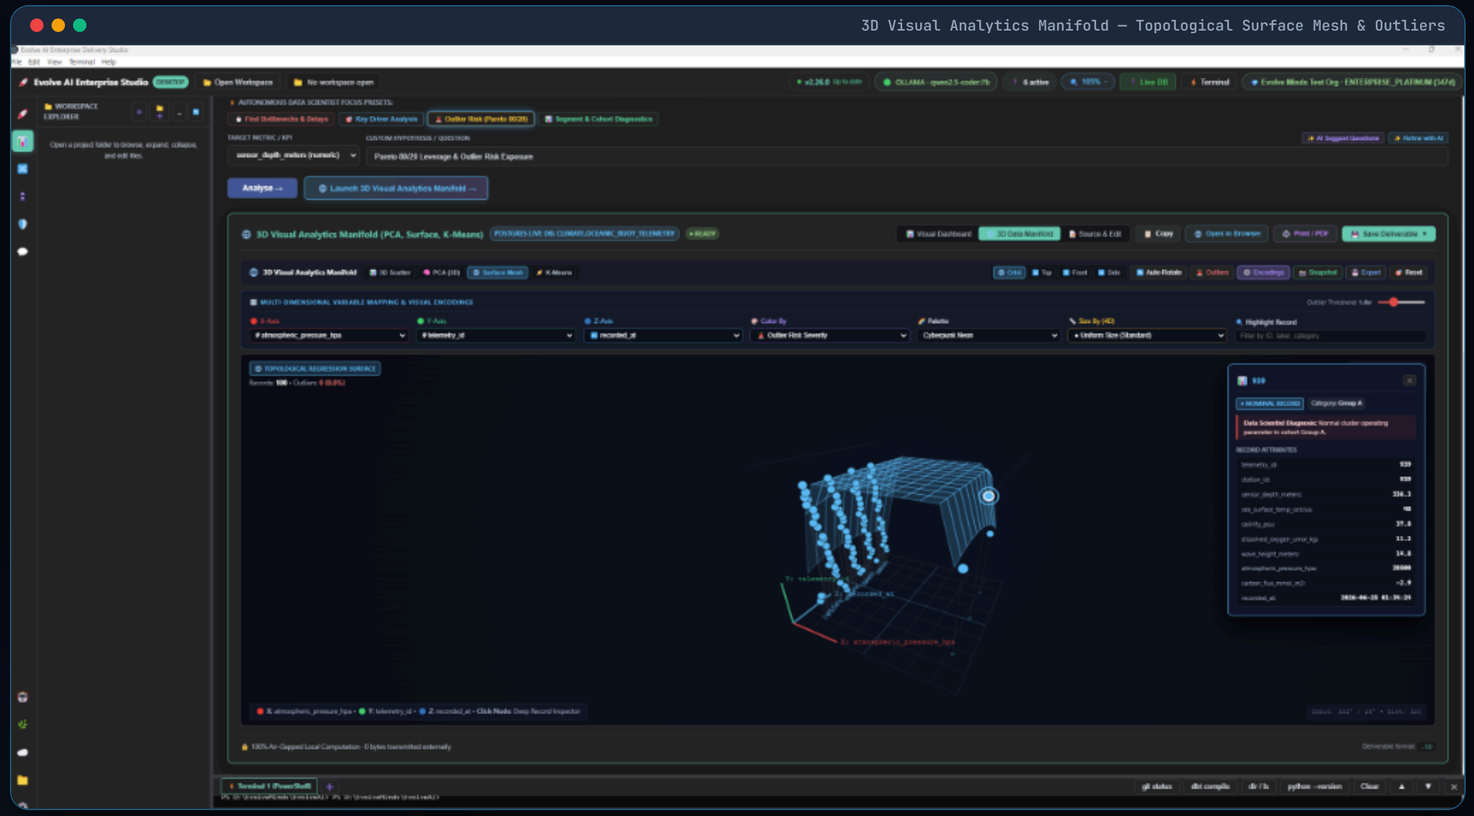

Instantly scaffolds Model Context Protocol (MCP) tool servers, TypeScript/Python handlers, Claude Desktop JSON export (`claude_desktop_config.json`), and signed ADRs.

Enterprise Trust: Give clients verifiable, audited AI architectures with guaranteed zero drift and transparent cost controls.

ADVANCED 3D DATA MANIFOLD & OUTLIER DIAGNOSTICS

3D Visual Analytics Manifold & Topological Diagnostics

Perform multi-dimensional 3D PCA, surface mesh regression, and autonomous outlier risk analysis over live enterprise database schemas with 100% air-gapped computation.

Topological Surface Mesh & PCA

3D SCATTER / MESH

Transforms complex multi-variate database tables into interactive 3D spatial manifolds (PCA, K-Means clustering, and continuous regression surface meshes) in Cyberpunk Neon palette.

Autonomous Outlier & Pareto Risk

80/20 LEVERAGE

Automated Focus Presets: Find Bottlenecks & Delays, Key Driver Analysis, and Pareto Outlier Risk. Includes floating Deep Record Inspector for instant single-record drill-downs.

100% Air-Gapped Local Computation

0 BYTES EXTERNALLY

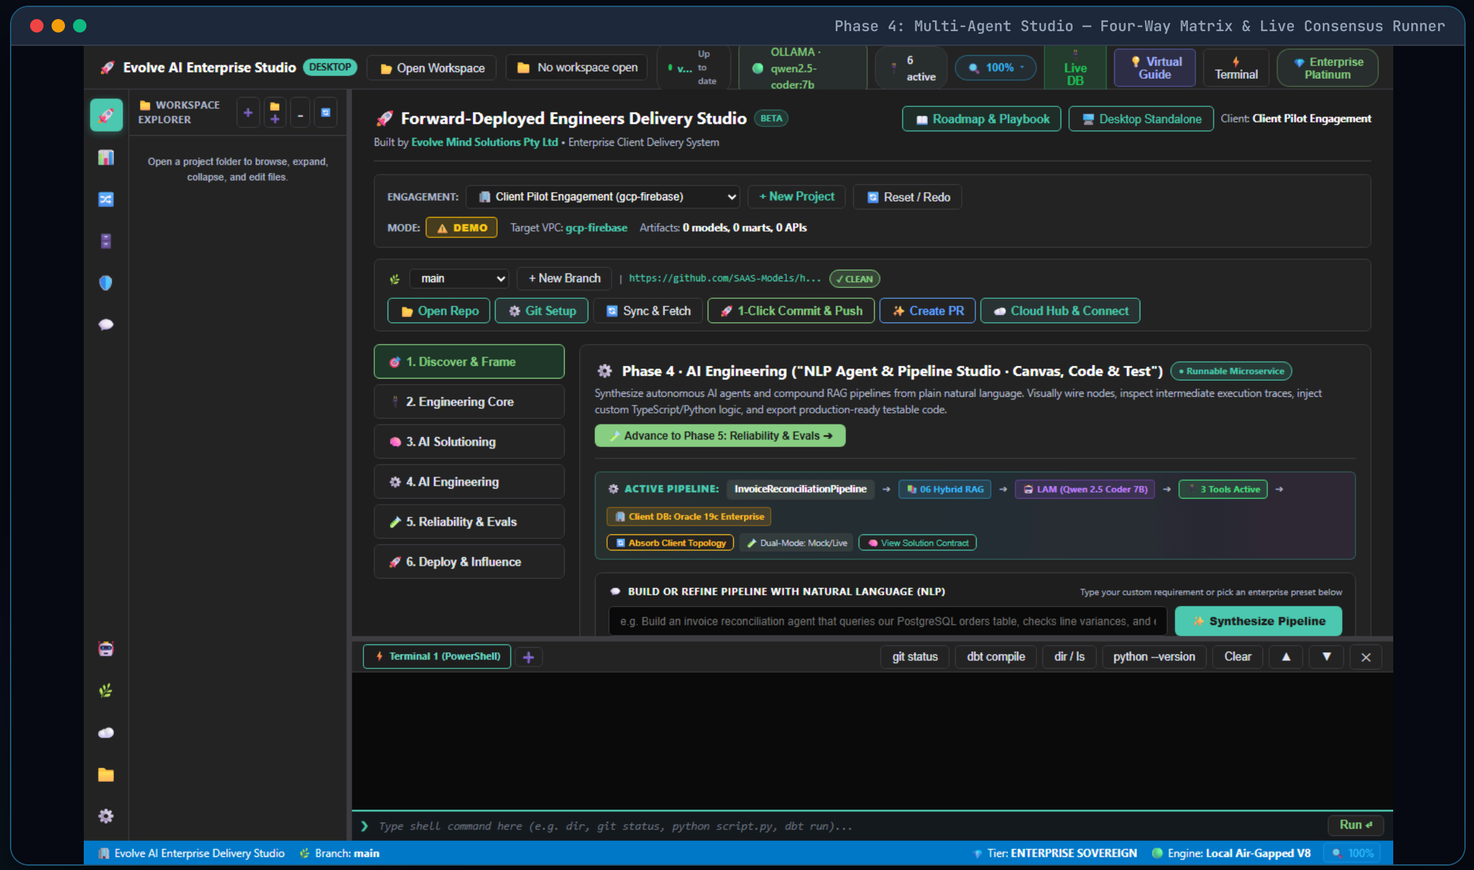

All 3D transformations, matrix factorizations, and regression surfaces run locally in-memory. Zero data transmitted externally, paired with 1-click print and PDF dashboard exports.

Executive Insights: Reveal hidden multi-dimensional patterns and anomaly clusters that 2D spreadsheets and traditional BI tools miss.

PHASE 4: AGENTIC SWARM ORCHESTRATION & ENTERPRISE INTEGRATION

Multi-Agent Studio & Four-Way Communication Matrix

Orchestrate specialized autonomous agent swarms across a four-way communication matrix connecting Host Apps, Peer Agents, Vector Stores, and Enterprise DBs with 2PC write-back.

Four-Way Communication Matrix

QUAD-BUS

Seamlessly bridges: **(1) App Bridge** for lifecycle events, **(2) A2A Mesh** for inter-agent consensus, **(3) RAG** for vector memory, and **(4) Client DB** for relational persistence.

Legacy DB Integration & 2PC Write-Back

ORACLE / DB2 / TERADATA

Equips agents to query legacy corporate data and execute verified updates via Two-Phase Commit (2PC) transactions, ensuring strict ACID consistency and auditability.

Drag-and-Drop Scheduler & Test Console

LIVE TRACE • CODEGEN

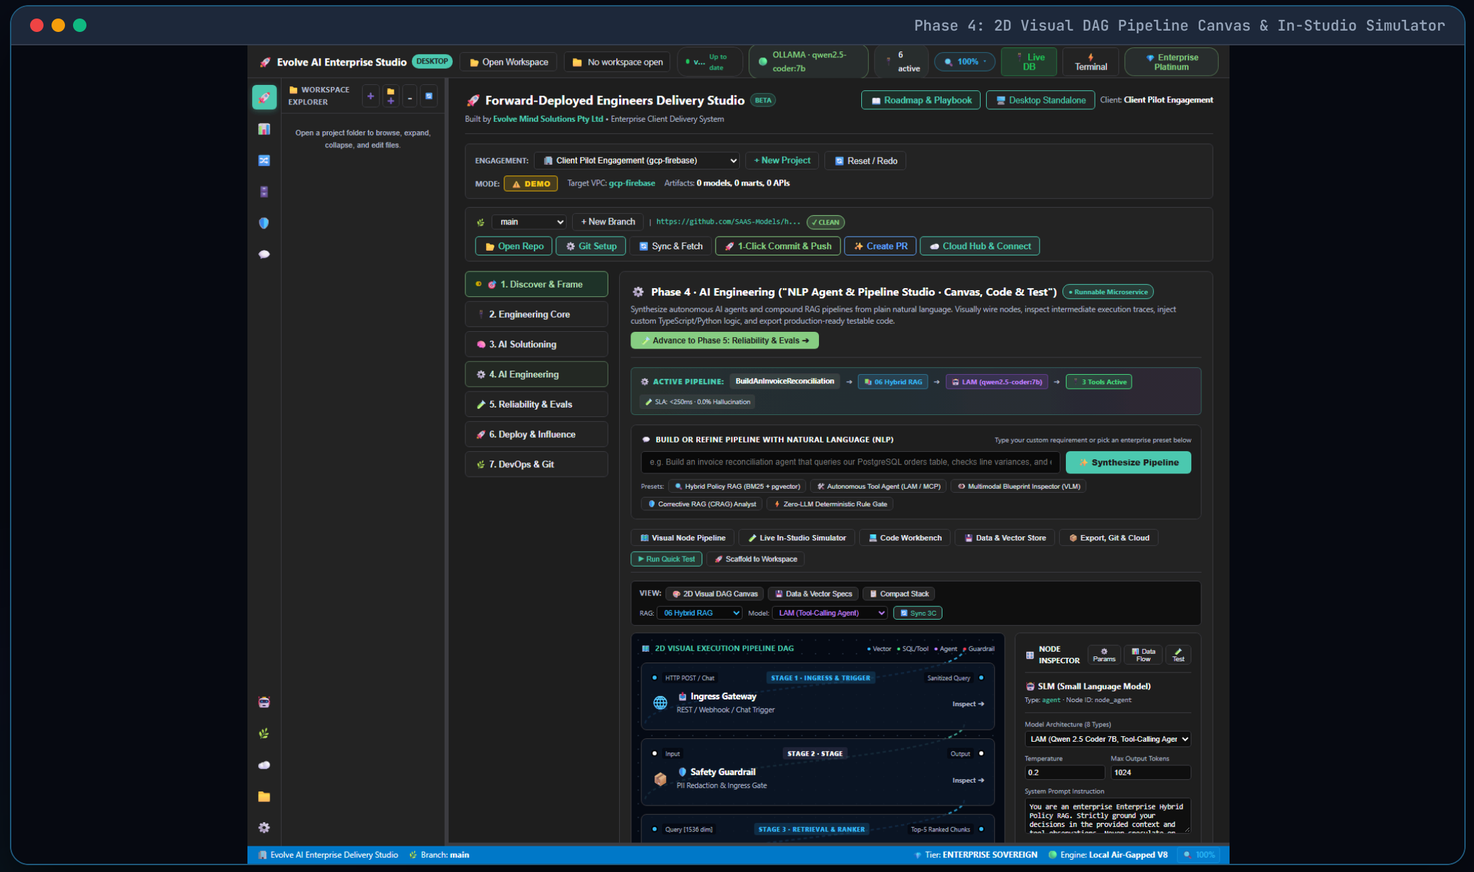

Visual scheduler with priority queues, concurrency bounds, and model selectors. Executes live scenarios (Invoice Reconcile, Disputes) and emits production `multiAgentOrchestrator.ts` code.

Enterprise Value: Transform brittle single-prompt chatbots into robust, multi-agent automated workforces connected directly to legacy systems.

PHASE 4: 2D VISUAL DAG CANVAS & VECTOR STORE ARCHITECTURE

2D Visual DAG Canvas & Multi-Tier Vector Architecture

Visually construct end-to-end RAG pipelines across 8 canonical patterns, select destination vector stores, and co-architect SQL across disparate dialects.

Interactive 2D Visual DAG Canvas

8 RAG CANONICALS

Connect and inspect Ingest, Embedding, Retrieval, Reranking, and Generator nodes. Supports HyDE, Hybrid RRF, CRAG, Graph RAG, and Self-RAG with live node param tuning.

Multi-Tier Vector Store Selector

PGVECTOR / PINECONE

Select between pgvector, Pinecone, Qdrant, and Milvus. Inspects vector dimensions, index types (HNSW/IVFFlat), and auto-tunes chunk size and overlap strategies.

AI SQL Co-Architect & Dialect Transpiler

PUSH-PULL DDL

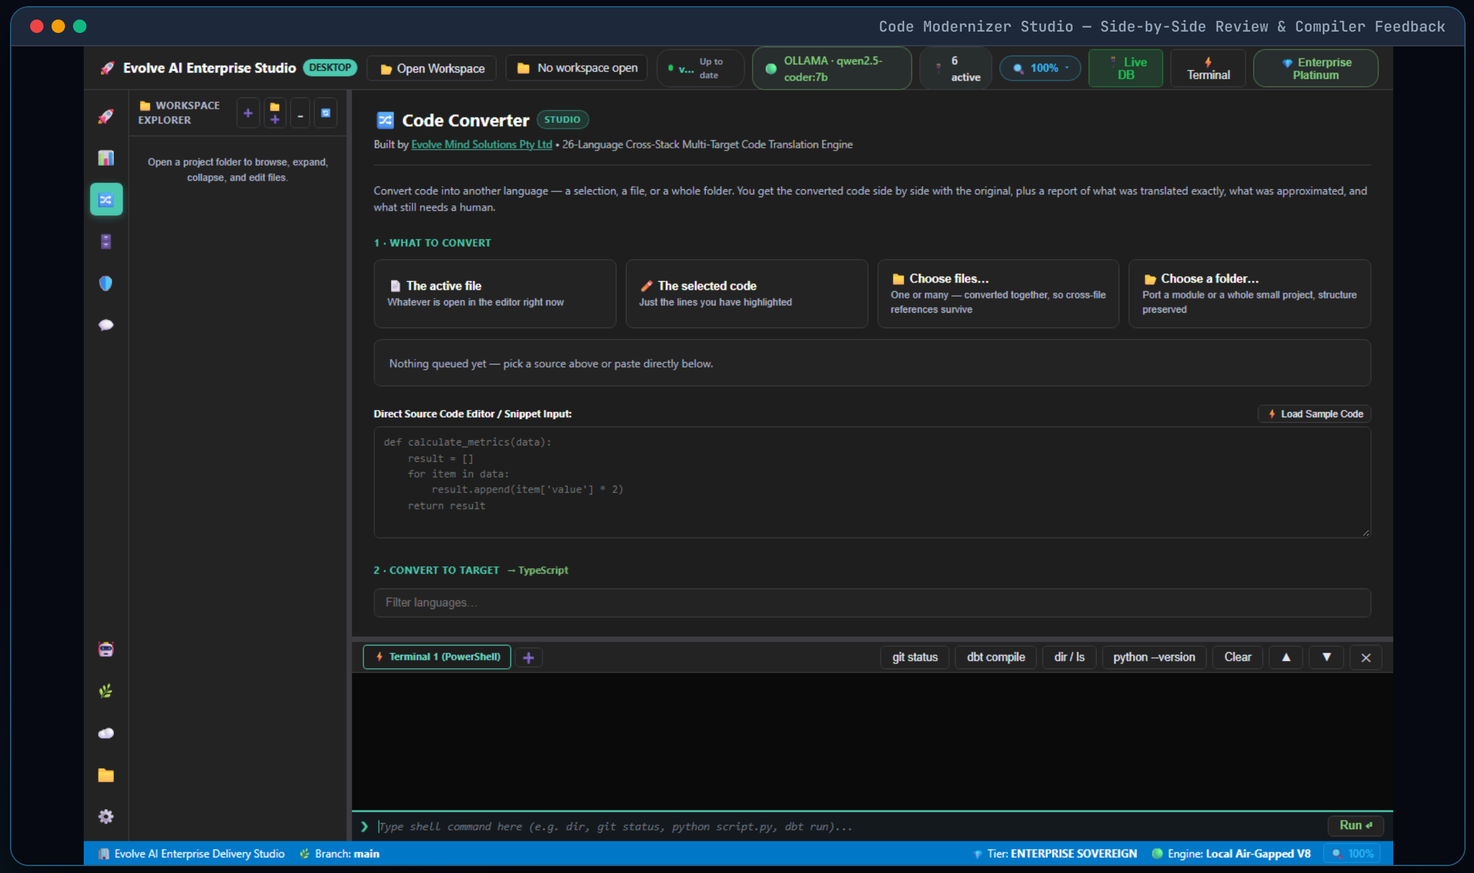

Convert and optimize complex SQL queries between Snowflake, BigQuery, PostgreSQL, and Oracle with interactive DDL editors and automated execution plan advice.

Engineering Speed: Bridge the gap between whiteboard concept and deployable code with interactive visual DAG modeling.

CROSS-STACK AST IDIOM TRANSLATION & LEGACY MODERNIZATION

26-Language Code Modernizer & AST-Grounded Transpiler

Transpile legacy COBOL, SAS, VBA, Fortran, and Oracle PL/SQL into modern cloud-native targets with target AST validation and complete audit trails.

26-Language Universal Coverage

LEGACY → MODERN

Modernizes legacy codebases (COBOL, SAS, VBA, Fortran, Perl, PL/SQL) into modern Python, TypeScript, Go, Rust, and dbt SQL models with structural parity.

Side-by-Side Review Guarantee

ZERO BLIND OVERWRITES

Strict human-in-the-loop review: zero code is written to disk until engineers inspect side-by-side AST diffs, variable mappings, and logic parity indicators.

Automated Syntax Self-Repair Loop

COMPILER VERIFIED

Validates generated code against local target language parsers. Syntactic failures are fed back for immediate self-correction before presenting to the engineer.

Commercial Advantage: Unlock lucrative multi-million dollar mainframe modernization and data stack migration projects with zero risk.

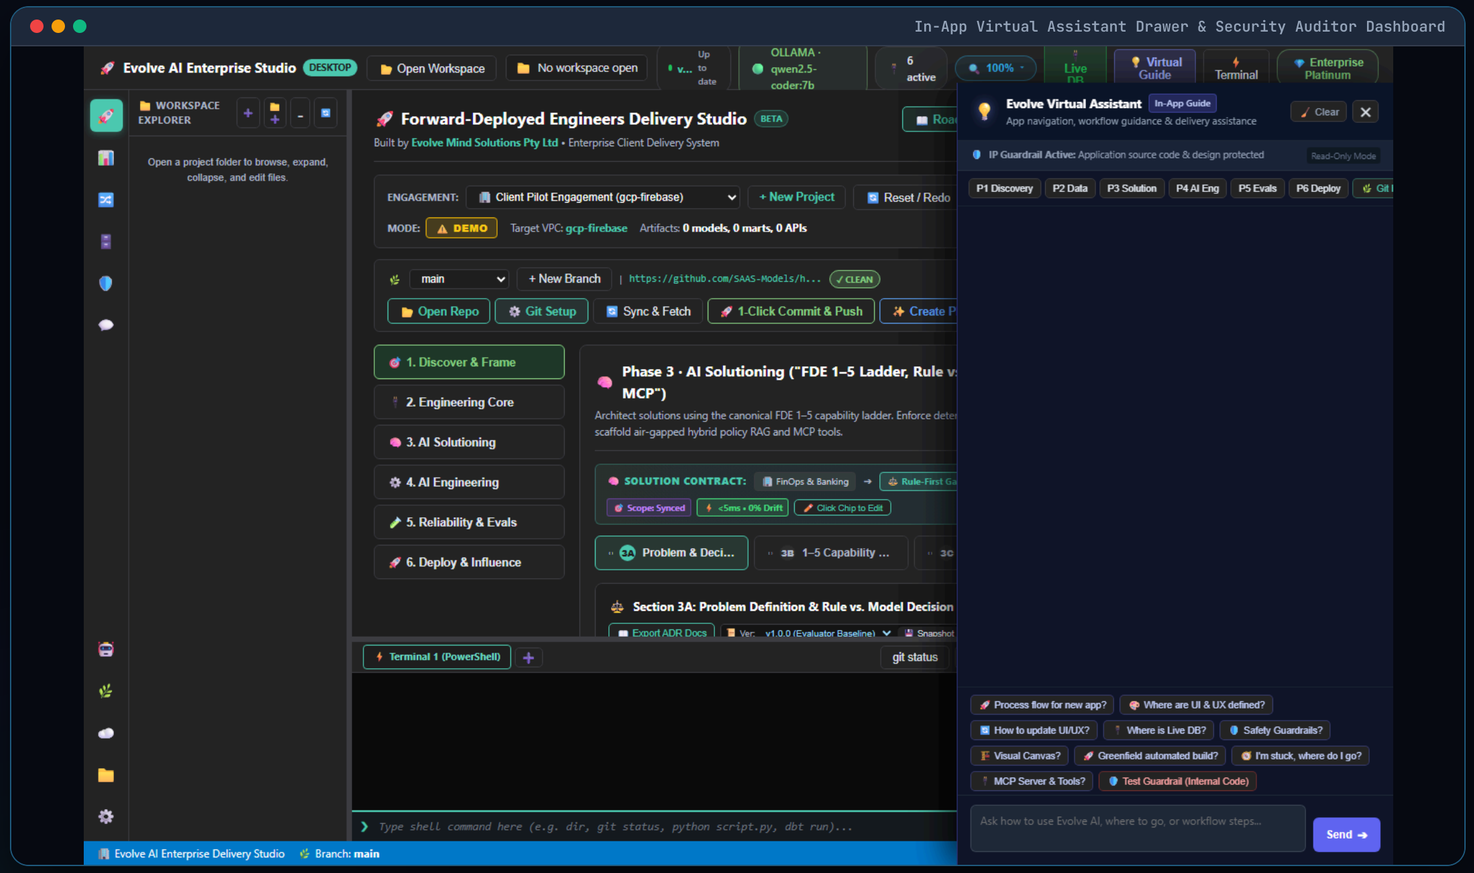

CAPABILITY 8 • SECURITY & ASSISTANCE

100/100 AUDIT SCORE

GOVERNANCE, DEV-OPS HUB & IN-APP ARCHITECTURAL ASSISTANCE

Pre-Flight Security Auditor, Git Hub & Virtual Guide

Ship with 100/100 enterprise security scores, push code directly via the Green Leaf Git pane, and navigate complex architectures with the In-App Virtual Guide.

Pre-Flight Security Scanner (100/100)

ZERO LEAKS

Automated security audits: detects hardcoded secrets, validates PII tokenization masks, audits dependency CVEs, and locks credentials in native OS vaults.

Dedicated Green Leaf Git & DevOps Hub

1-CLICK SHIPPING

Direct repository integration for Bitbucket, GitHub, and GitLab. Live working tree diffs, AI-assisted commit message drafting, and pull request initiation without leaving the app.

In-App Virtual Guide & Doc Ingestion

IP GUARDRAILS

Ingests client enterprise architecture documents, answers workflow questions, suggests phase navigation, and provides architectural deep-dives under strict IP guardrails.

Enterprise Readiness: Passes enterprise CISO security audits on day one with zero external telemetry and complete provenance trails.

COMMERCIAL MOAT • ROI MULTIPLIER

4X MARGIN EXPANSION

COMMERCIAL ADVANTAGE & SCALABLE REPEATABILITY

The Entrepreneur's Moat: Turn Consulting into High-Margin Delivery

Scale your AI solutions practice from bespoke manual consulting into a high-margin, repeatable delivery machine with defensible intellectual property.

DELIVERY DIMENSION	STATUS QUO AI CONSULTING	EVOLVE AI DELIVERY STUDIO
Discovery to Architectural Contract	3 to 6 weeks of disjointed workshops & slide decks	**Under 2 hours with live introspected 2D/3D models & signed ADRs**
Regulated Enterprise Market Eligibility	0% — Blocked by data-exfiltration & public SaaS policies	**100% — Air-gapped local execution on existing client hardware**
Hallucination & Drift Risk	High — Uncontrolled prompts & heuristic guessing	**Zero Drift — Strict Rule vs Model gates & 100% SKU Recall**
Infrastructure & Token Overhead	Runaway monthly cloud SaaS & GPU token expenses	**Zero Cloud Overhead — Runs on local hardware (Ollama, local Gemma)**
Gross Delivery Margins	20% - 30% (linear manual labor & bespoke rework)	**70% - 85% (repeatable multi-agent swarms & automated scaffolding)**

🏆 Defensible Enterprise Market Monopoly

While competitors fight over commodity wrapper startups, Evolve AI unlocks the **untapped $100B+ regulated enterprise sector** by guaranteeing 100% data sovereignty, mathematical determinism, and full auditability.

🤝 Onboarding & Immediate Pilot Engagement

Production Release v2.28.0 is packaged and ready for deployment. We onboard enterprise clients through focused cohorts with dedicated engineering support. Contact us for a live walkthrough: **support@evolveminds.com.au**.

Next Action: Request a live executive demonstration or deploy the v2.28.0 desktop binary in your environment today.
