

SOVEREIGN AI & FORWARD-DEPLOYED DELIVERY STUDIO

Why 80% of Enterprise AI Pilots Fail

And how modern Forward-Deployed Engineering teams cut client delivery from 3 months to 14 days with zero cloud data leaks.

THE ZERO-ADMIN PORTABLE DELIVERY STUDIO

Automate data plumbing, transpile legacy Oracle/T-SQL, scaffold multi-cloud DevOps, and deploy deterministic AI directly in client VPCs.

Portable .exe (Zero Admin Rights)

Phase 5: Oracle/T-SQL Transpiler

Phase 6: Multi-Cloud DevOps Hub

Ed25519 Hardware-Bound Offline Licensing

PRIVATE ENTERPRISE PILOT PROGRAM

5 SEATS OPEN FOR EVALUATION →

WHERE TRADITIONAL AI STALLS IN CLIENT VPCS

The 3 Enterprise Blockers

Most pilots don't fail on model capability. They fail on IT installation friction, compliance bans, and tedious migration drag.

1. The IT Admin Rights Barrier

4-8 WEEKS LOST

Enterprise security blocks IDE plugins and third-party installers on client-managed laptops. FDEs burn weeks waiting for IT procurement tickets just to install basic developer tooling.

2. The Cloud SaaS Compliance Veto

BLOCKED BY INFOSEC

Proprietary banking schemas, customer PII, and production SQL cannot touch external SaaS endpoints. Cloud-dependent AI coding assistants fail bank-grade data sovereignty reviews immediately.

3. The Legacy Migration & Plumbing Sinkhole

MONTHS OF DRAG

Engineers waste 80% of pilot time manually rewriting decades of legacy Oracle PL/SQL & T-SQL into modern Snowflake/BigQuery, hand-crafting schema mappers, and writing retry glue.

LIVE INTROSPECTION & INSTANT INGESTION

From Raw DBs to Typed Marts

Plug straight into live client data and emit typed staging models and SDKs in 15 minutes—not weeks.

Phase 1: Live DB Introspection (7 Engines)

100% AIR-GAPPED

Direct, read-only introspection across **Postgres**, **Snowflake**, **BigQuery**, **SQL Server**, **MySQL**, **SQLite**, and **ClickHouse**. Extracts tables, foreign keys, and partition keys without sending a single byte outside the VPC.

Phase 2: Foreign SchemaMapper & dbt

ZERO-SHOT ALIGNMENT

Instantly maps messy enterprise column naming (`CUST_TXN_NBR` → `customer_id`). Compiles production **dbt** staging models (`stg_client_data.sql`) with automated data contracts.

Phase 3 & 4: Typed SDKs & Runbook Factory

CLIENT HANDOFF

Scaffolds resilient **TypeScript & Python SDKs** with jittered exponential backoff and rate-limiting guards. Automatically generates executive handover documentation (`DEPLOYMENT_RUNBOOK.md` and `DATA_DICTIONARY.md`).

ENTERPRISE MODERNIZATION POWERHOUSE

Automated **SQL** Transpiler & Security

Save hundreds of engineering hours on legacy migrations, access governance, and synthetic pipelines.

Oracle & T-SQL Transpiler

Converts complex legacy Oracle PL/SQL & SQL Server T-SQL directly into **Snowflake** and **BigQuery** dbt models with tests, macros, and schema validations.

Row-Level Security (RLS) Gen

Generates production multi-tenant isolation and Row-Level Security policies across **Postgres**, **Snowflake**, and **BigQuery** with zero manual scripting.

Reverse ETL Sync Workers

Scaffolds idempotent synchronization pipelines with dead-letter queues, exponential batching, and automated failure recovery for warehouse-to-app syncs.

Synthetic Data & Mock APIs

Generates referentially intact synthetic datasets (Customers, Invoices) and zero-dependency mock REST servers in Node.js & Python for offline staging.

TURNKEY INFRASTRUCTURE SCAFFOLDING

Phase 6: Multi-Cloud DevOps Hub

Bridge the gap between data code and production infrastructure. Scaffold cloud deployments in 1 click.

Multi-Cloud Terraform HCL (GCP, AWS, Azure)

IAC PRODUCTION CODE

Auto-scaffolds complete infrastructure as code: secure VPCs, private subnets, least-privilege IAM roles, Cloud Run services, BigQuery datasets, and S3/GCS buckets.

GPU Kubernetes Manifests & Docker Compose

CONTAINER HARDENED

Generates production Kubernetes manifests with GPU node-selectors, resource limits, namespace boundaries, and multi-stage container Dockerfiles.

Automated CI/CD Pipeline Generators

4 PLATFORMS

One-click pipeline generation for **GitHub Actions**, **GitLab CI**, **Bitbucket Pipelines**, and **Azure DevOps**—complete with test runners and pre-flight gates.

ZERO TRUST • ZERO TELEMETRY

Air-Gapped & Banking Security

Engineered specifically to satisfy strict bank-grade, defense, and enterprise healthcare audit standards on Day 1.

Ed25519 Offline Licensing

Hardware-bound cryptographic signatures with compiled master public key. Zero phone-home licensing servers. Operates permanently air-gapped.

Portable .exe (Zero Admin)

Runs directly as a standalone portable Windows executable (74.7 MB) with no admin rights, no registry modifications, and no VS Code dependencies.

PII Sanitizer & SIEM Forwarder

Automated in-flight PII masking and tamper-evident audit forwarding to **Splunk, Datadog, or Microsoft Sentinel** for strict compliance.

Data Drift & Quality Gates

Automated **Great Expectations & Soda Core** test runners and Databricks Lakehouse Unity Catalog lineage and query cost analysis.

SPEED TO IMPACT

From Months of Drag to 14-Day Delivery

Traditional Manual Delivery vs. Evolve AI Enterprise Standalone Studio.

DELIVERY DIMENSION	TRADITIONAL MANUAL FDE	EVOLVE AI ENTERPRISE STUDIO
IT Tooling Approval	4-8 Weeks (Admin rights & MSI)	Instant (Portable .exe, No Admin)
InfoSec & Air-Gap	Rejected (Cloud SaaS LLMs)	Day 1 (100% Air-gapped / Local VPC)
DB & Schema Ingest	5-10 Days (Manual DDL scripts)	<15 Minutes (Live 7-DB Introspect)
Legacy SQL Modernization	Months of manual PL/SQL rewrite	Minutes (Phase 5 SQL Transpiler)
Cloud Infrastructure	1-2 Weeks manual Terraform	1-Click (Phase 6 DevOps Hub)
Time to Client Handoff	3-4 Months average	<14 Days Guaranteed

FAST-TRACK YOUR DEPLOYMENT

Deploy Your Next Pilot in 14 Days

Secure one of the 5 pilot seats and equip your team with the standalone air-gapped studio.

1

Comment "PILOT" on LinkedIn

Leave a comment below, and our engineering team will send you the 90-day evaluation pack, architecture brief, and offline license key.

2

Download the Portable Studio (.exe)

Visit evolveminds.com.au/products/evolve-ai/ to download the zero-install Windows desktop executable (v2.20.0) with an instant 30-day evaluation.

3

Direct Inquiries & Pilot Onboarding

Contact our Sydney engineering team directly at contact@evolveminds.com.au for a confidential 15-minute architectural walkthrough.
