

Executive Summary: Evolve AI Enterprise is a sovereign, 100% air-gapped Forward-Deployed Engineers (FDE) delivery studio distributed as a zero-installation portable desktop executable (74.7 MB, Windows x64). It runs with **zero administrator rights**, bypassing enterprise IT installer blockers and compressing client pilot delivery from 3 months to 14 days.

1. Core Delivery Framework (6-Phase Architecture)

Phase	Core Capabilities	Enterprise Value Delivered
Phase 1: DB Introspect	Live read-only inspection of 7 engines (Postgres, Snowflake, BigQuery, SQL Server, MySQL, SQLite, ClickHouse).	Extracts table schemas, foreign keys, and partition metadata in <15 mins with zero cloud telemetry.
Phase 2: SchemaMapper	Zero-shot foreign column mapping (e.g. <code>CUST_TXN_NBR</code> → <code>customer_id</code>). Compiles dbt marts.	Auto-generates typed staging models (<code>stg_client_data.sql</code>) and automated schema validation tests.
Phase 3: Resilient SDKs	Typed TypeScript & Python connector generation with exponential backoff, jitter, and rate-limiters.	Prevents client firewall tripping and hardens integrations against upstream API rate-limits.
Phase 4: Runbook Factory	Auto-compiles <code>DEPLOYMENT_RUNBOOK.md</code> , <code>DATA_DICTIONARY.md</code> , and Mermaid diagrams.	Gives client IT complete audit documentation and 1-command rollback procedures on Day 14.
Phase 5: Modernization Enterprise Exclusive	Oracle PL/SQL & SQL Server T-SQL Transpiler to Snowflake & BigQuery; Row-Level Security (RLS) Gen.	Cuts legacy database migration projects from 6 months to 2 weeks. Scaffolds Reverse ETL & synthetic data.
Phase 6: DevOps Hub Enterprise Exclusive	Terraform HCL for AWS/GCP/Azure, GPU Kubernetes manifests, Docker, and CI/CD pipelines.	Delivers a turnkey GitOps repository with automated test gates (GitHub, GitLab, Bitbucket, Azure DevOps).

2. System Topology & Component Execution Flow

Network Isolation Guarantee: When operated in air-gapped mode, Evolve AI Enterprise binds strictly to loopback interfaces and internal VPC endpoints. Outbound telemetry, model training harvesting, and license validation calls are physically disabled at compile time.

Enterprise Security & Pilot Evaluation Protocol

3. InfoSec, Compliance & Governance Specifications

Security Dimension	Specification & Verification Standard
Data Residency & Air-Gap	100% offline local execution. Zero external analytics, zero cloud LLM routing, zero phone-home calls. Works seamlessly inside air-gapped financial, defense, and healthcare enclaves.
Offline Cryptography	Asymmetric Ed25519 digital signature licensing verified against a compiled master public key. Zero phone-home license validation servers. Machine hardware-fingerprint binding available.
Zero-Admin Deployment	Standalone single-binary executable (74.7 MB). Runs directly from local user space or encrypted external media with no admin privileges, no registry writes, and no IDE dependency.
Secret & Key Vault	Zero plaintext secrets in files or code. Encrypted using OS-native hardware entropy: Windows Credential Manager (DPAPI), macOS Keychain, or Linux SecretService.
Audit Trail & SIEM	Tamper-evident audit logs forwarded directly to enterprise SIEM platforms (Splunk, Datadog, Microsoft Sentinel). Automated in-flight PII masking with zero disk persistence.
Regulatory Alignment	Engineered to support ISO 42001 AI governance standards and compliance with the Australian Privacy Act automated-decision rules.

4. 90-Day Enterprise Pilot Evaluation Protocol

For organizations evaluating Evolve AI Enterprise during our limited pilot cohort:

- Step 1: Download the Portable Studio** — Download `evolve-ai-enterprise-portable-2.21.0-win32-x64.exe` (74.7 MB) from [evolveai.com.au/products/evolve-ai/download/](https://www.evolveai.com.au/products/evolve-ai/download/). Launch immediately without installation.
- Step 2: Instant Evaluation or License Key** — Evaluate immediately using the in-memory **30-Day Air-Gapped Platinum Trial**, or paste your team's signed Ed25519 pilot key (`EM-ENT-V1...`) for 90-day multi-seat coverage.
- Step 3: Test on Your Infrastructure** — Introspect your databases, transpile legacy Oracle/T-SQL queries into Snowflake or BigQuery dbt marts, and scaffold multi-cloud Terraform pipelines.

5. Commercial & Pilot Contact Information
