

ENTERPRISE DELIVERY PLATFORM FOR AI FOUNDERS & ENTREPRENEURS

Deploy Client AI in **14 Days** Instead of 3 Months

The zero-admin, standalone engineering workbench that turns complex enterprise legacy databases, strict InfoSec compliance, and client IT lockouts into rapid, high-margin delivery.

Zero Admin Rights (.exe)

Portable 74.7 MB desktop binary runs immediately on locked-down client machines with zero installation friction.

2D & 3D Schema Topology

Introspects 7 live DB engines, renders column-to-column bezier links, and auto-generates production dbt staging marts.

Bank-Grade InfoSec Day 1

Operates 100% air-gapped inside client VPCs. Zero cloud data leaks, offline Ed25519 licensing, and SHA-256 integrity audits.

THE UNGLAMOROUS REALITY OF ENTERPRISE CLIENT PILOTS

Why 80% of Enterprise AI Pilots Burn Runway & Fail

Technical founders don't lose enterprise deals on AI intelligence. They lose them on delivery friction, IT permission blocks, and weeks of manual data plumbing.

1. The IT Admin Wall

4 TO 8 WEEKS LOST

Client security policies strictly prohibit third-party installers, command-line developer tools, or VS Code plugins on enterprise laptops. Your engineers waste up to two months waiting for IT ticketing approvals just to set up basic developer tooling.

2. The Cloud SaaS InfoSec Veto

BLOCKED BY RISK & COMPLIANCE

Proprietary banking schemas, customer PII, and production transactional databases cannot touch public SaaS endpoints or third-party cloud LLM APIs. Cloud-dependent coding tools fail bank-grade data sovereignty reviews immediately.

3. The Spaghetti Schema Sinkhole

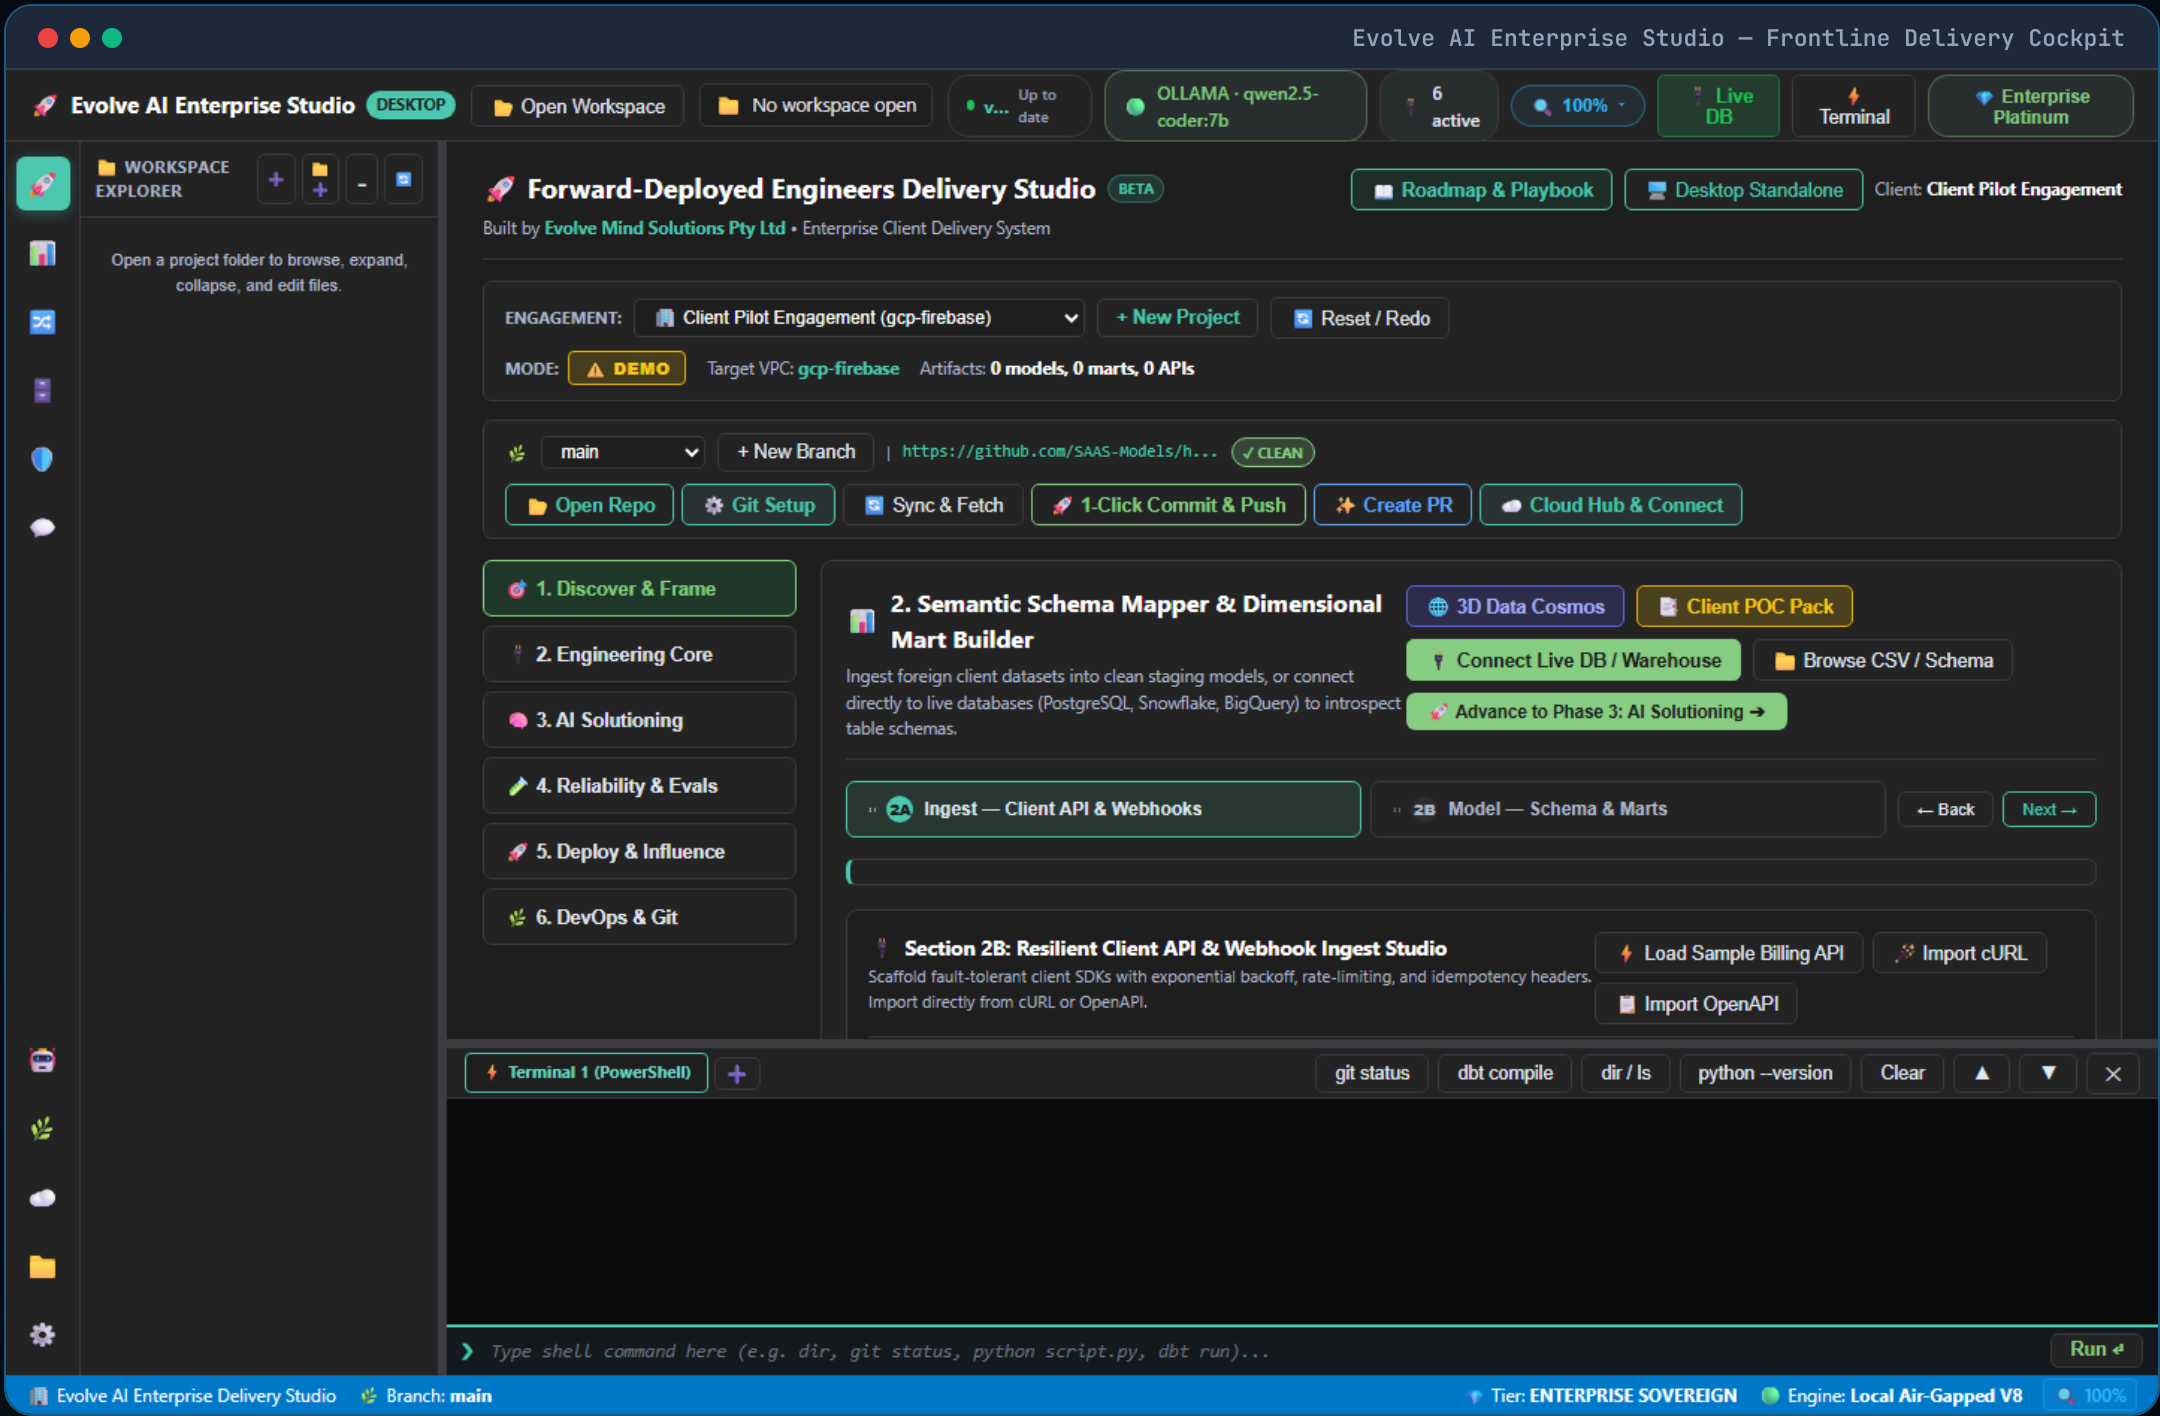

80% OF TIME SPENT ON PLUMBING

Client data is locked across 200+ undocumented relational tables in Oracle, Postgres, or SQL Server. Engineers spend weeks hand-crafting schema mappers, writing pipeline glue, and transposing legacy stored procedures instead of building AI features.

PORTABLE SOVEREIGN COCKPIT

Zero-Admin Portable Desktop Architecture

Runs instantly as a standalone 74.7 MB executable. No admin elevation, no registry edits, and no VS Code dependency.

Standalone Portable Executable

ZERO INSTALL

Engineers download and launch the app immediately on client-managed Windows laptops. Eliminates the 6-week IT procurement bottleneck completely.

100% Air-Gapped & Local Execution

AIR-GAPPED V8

Zero external telemetry, zero SaaS dependencies. Operates entirely inside the client's local VPC or air-gapped network with offline Ollama model bindings.

Integrated Git & Step Navigation

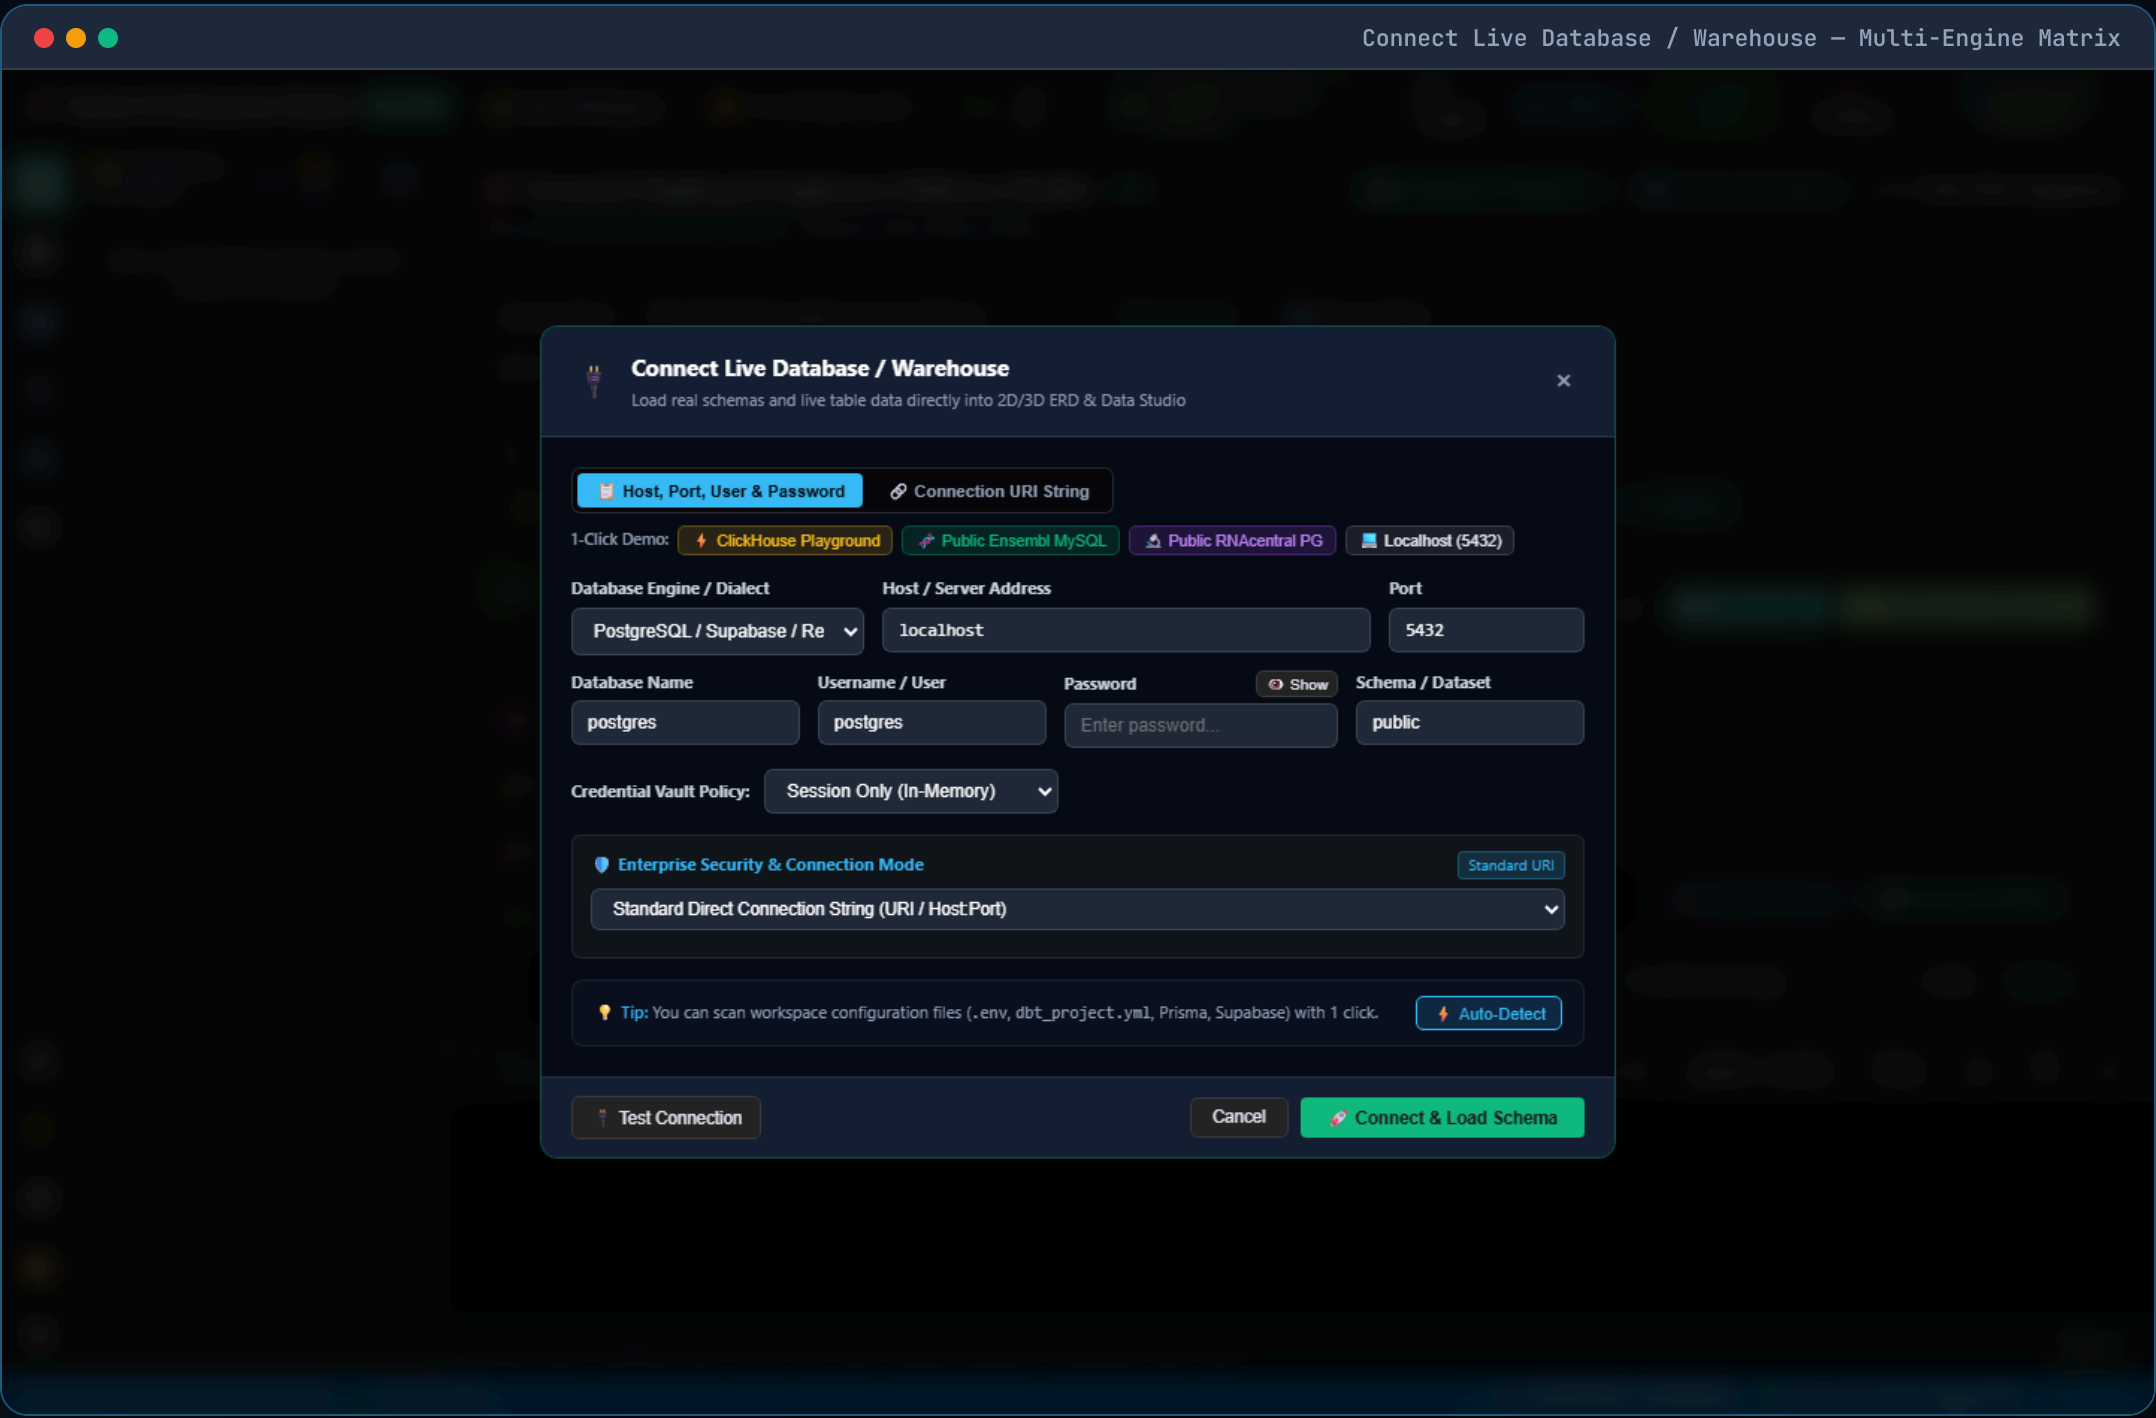

PHASES 1-6

Structured delivery methodology: Discover & Frame → Engineering Core → AI Solutioning → Reliability & Evals → Deploy & Influence → DevOps & Git.

INSTANT DATA CONNECTIVITY & SAMPLING

Universal Live Database Introspection

Direct read-only schema scanning and live data sampling across 7 major database engines with zero data leaving the VPC.

Multi-Engine Matrix

READ-ONLY

Native drivers for **PostgreSQL**, **Snowflake**, **BigQuery**, **SQL Server**, **MySQL**, **SQLite**, and **ClickHouse**. Scans schemas in seconds without overhead.

1-Click Config Auto-Detection

AUTO-DETECT

Instantly parses workspace configuration files (`.env`, `dbt_project.yml`, Prisma, Supabase) to establish live connections in 1 click.

In-Memory Vault Policy

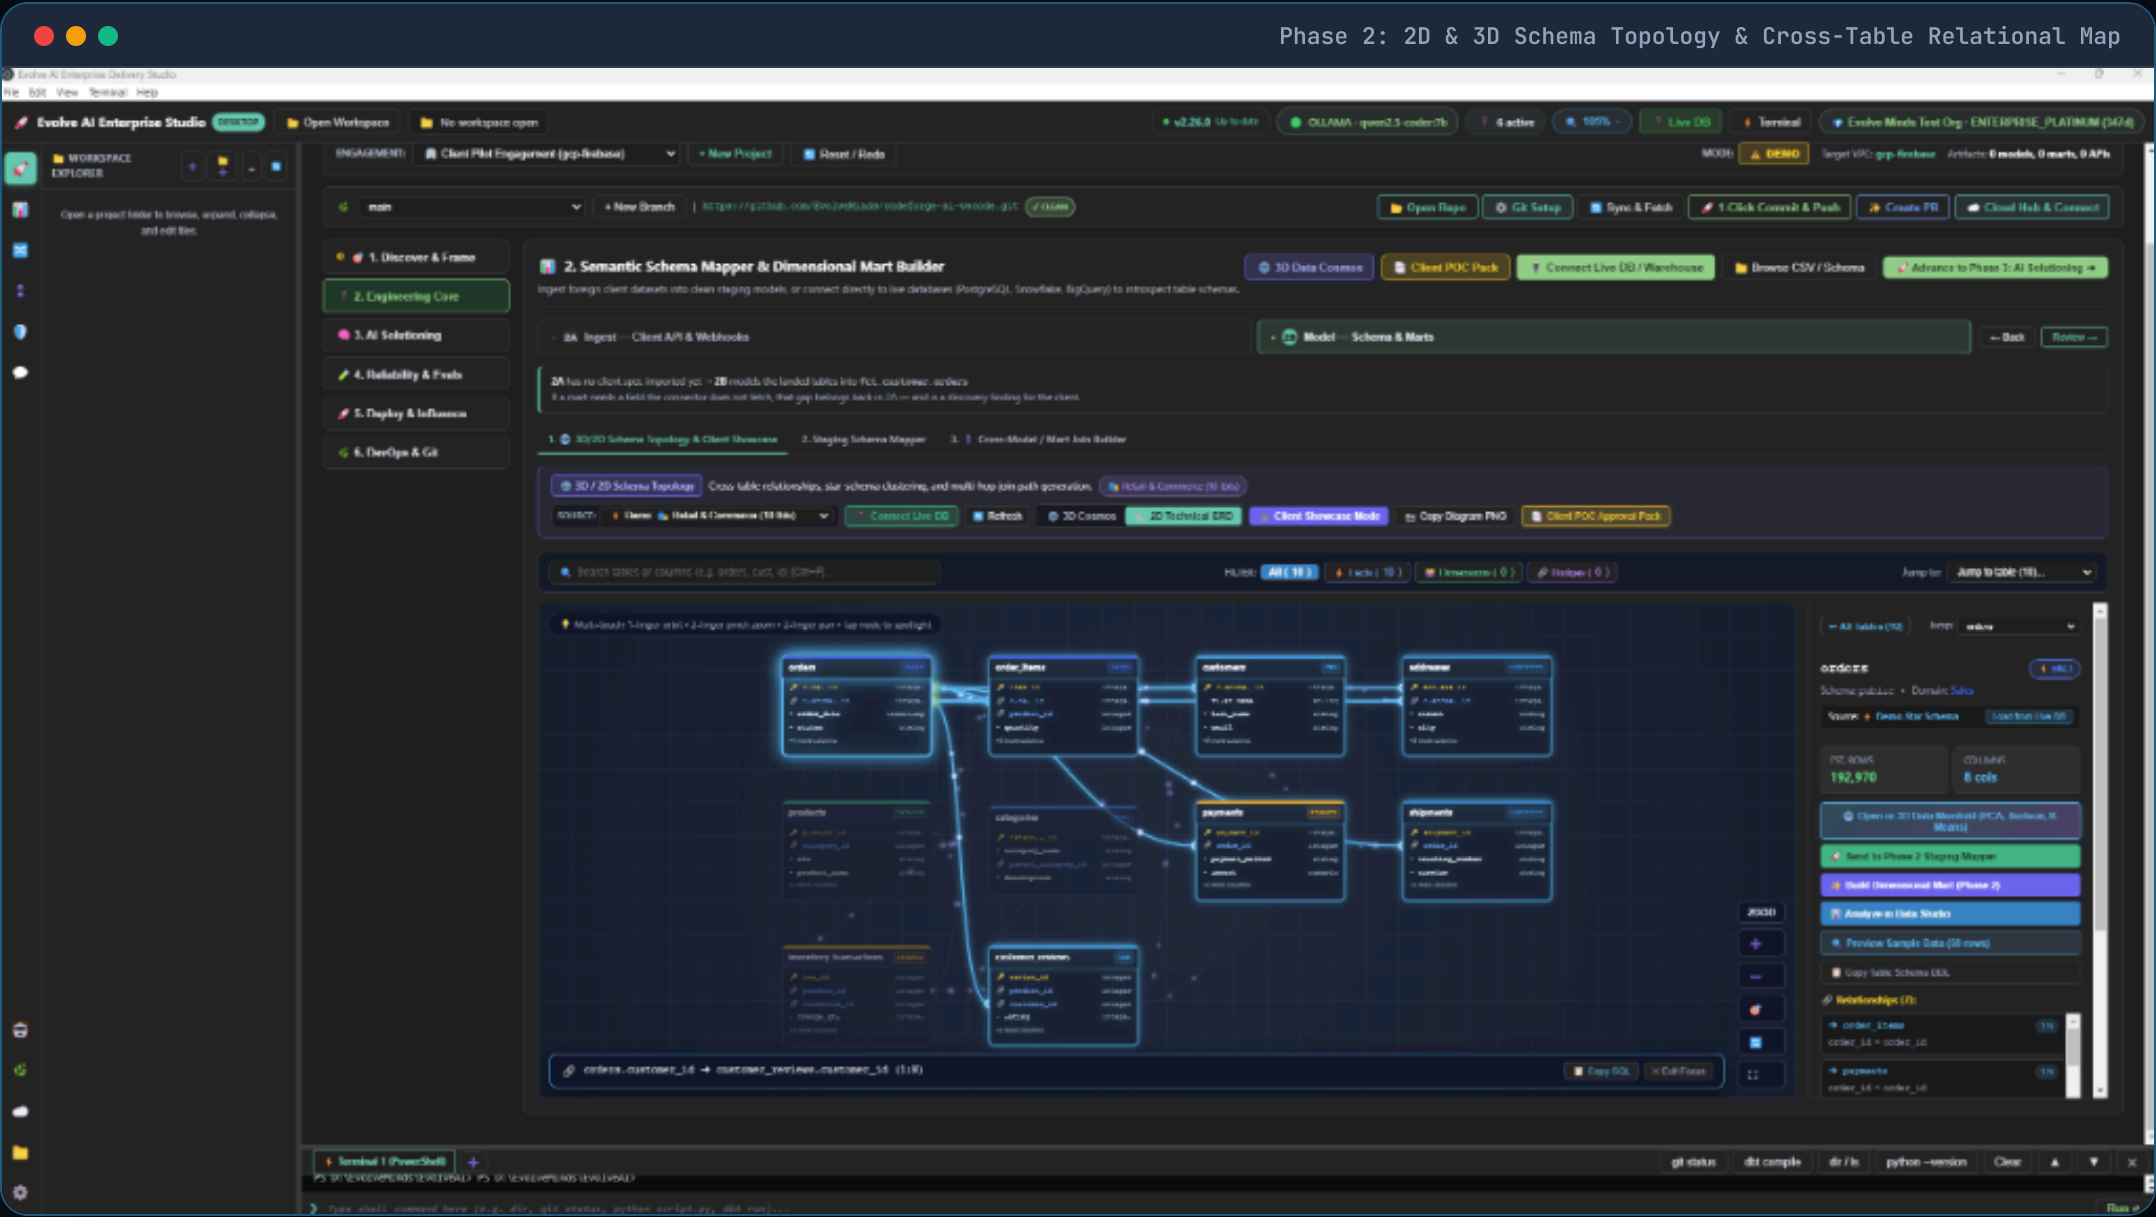

SESSION ONLY

Credentials are kept in volatile memory only and never written to plain-text configuration files, meeting strict bank-grade InfoSec policies.

CROSS-TABLE TOPOLOGY & CLIENT SHOWCASE

Interactive 2D & 3D Schema Topology

Explore complex enterprise database schemas in interactive 2D ERD and 3D Celestial orbit with column-to-column PK/FK linking and join isolation.

Dual-Mode 2D ERD & 3D Cosmos

2D / 3D DUAL

1-click toggle between a 20x14 dynamic technical ERD grid and an interactive 3D Celestial star cluster. Auto-fits massive enterprise schemas (265+ tables) with responsive bounding-box layout.

Column-to-Column Relational Linking

[PK] → [FK]

Illuminated cubic bezier curves linking exact primary keys to foreign keys with socket pins. Hover within 14px for live join formula tooltips, multi-hop path resolution, and cardinality metrics.

Table & Link Isolation Mode

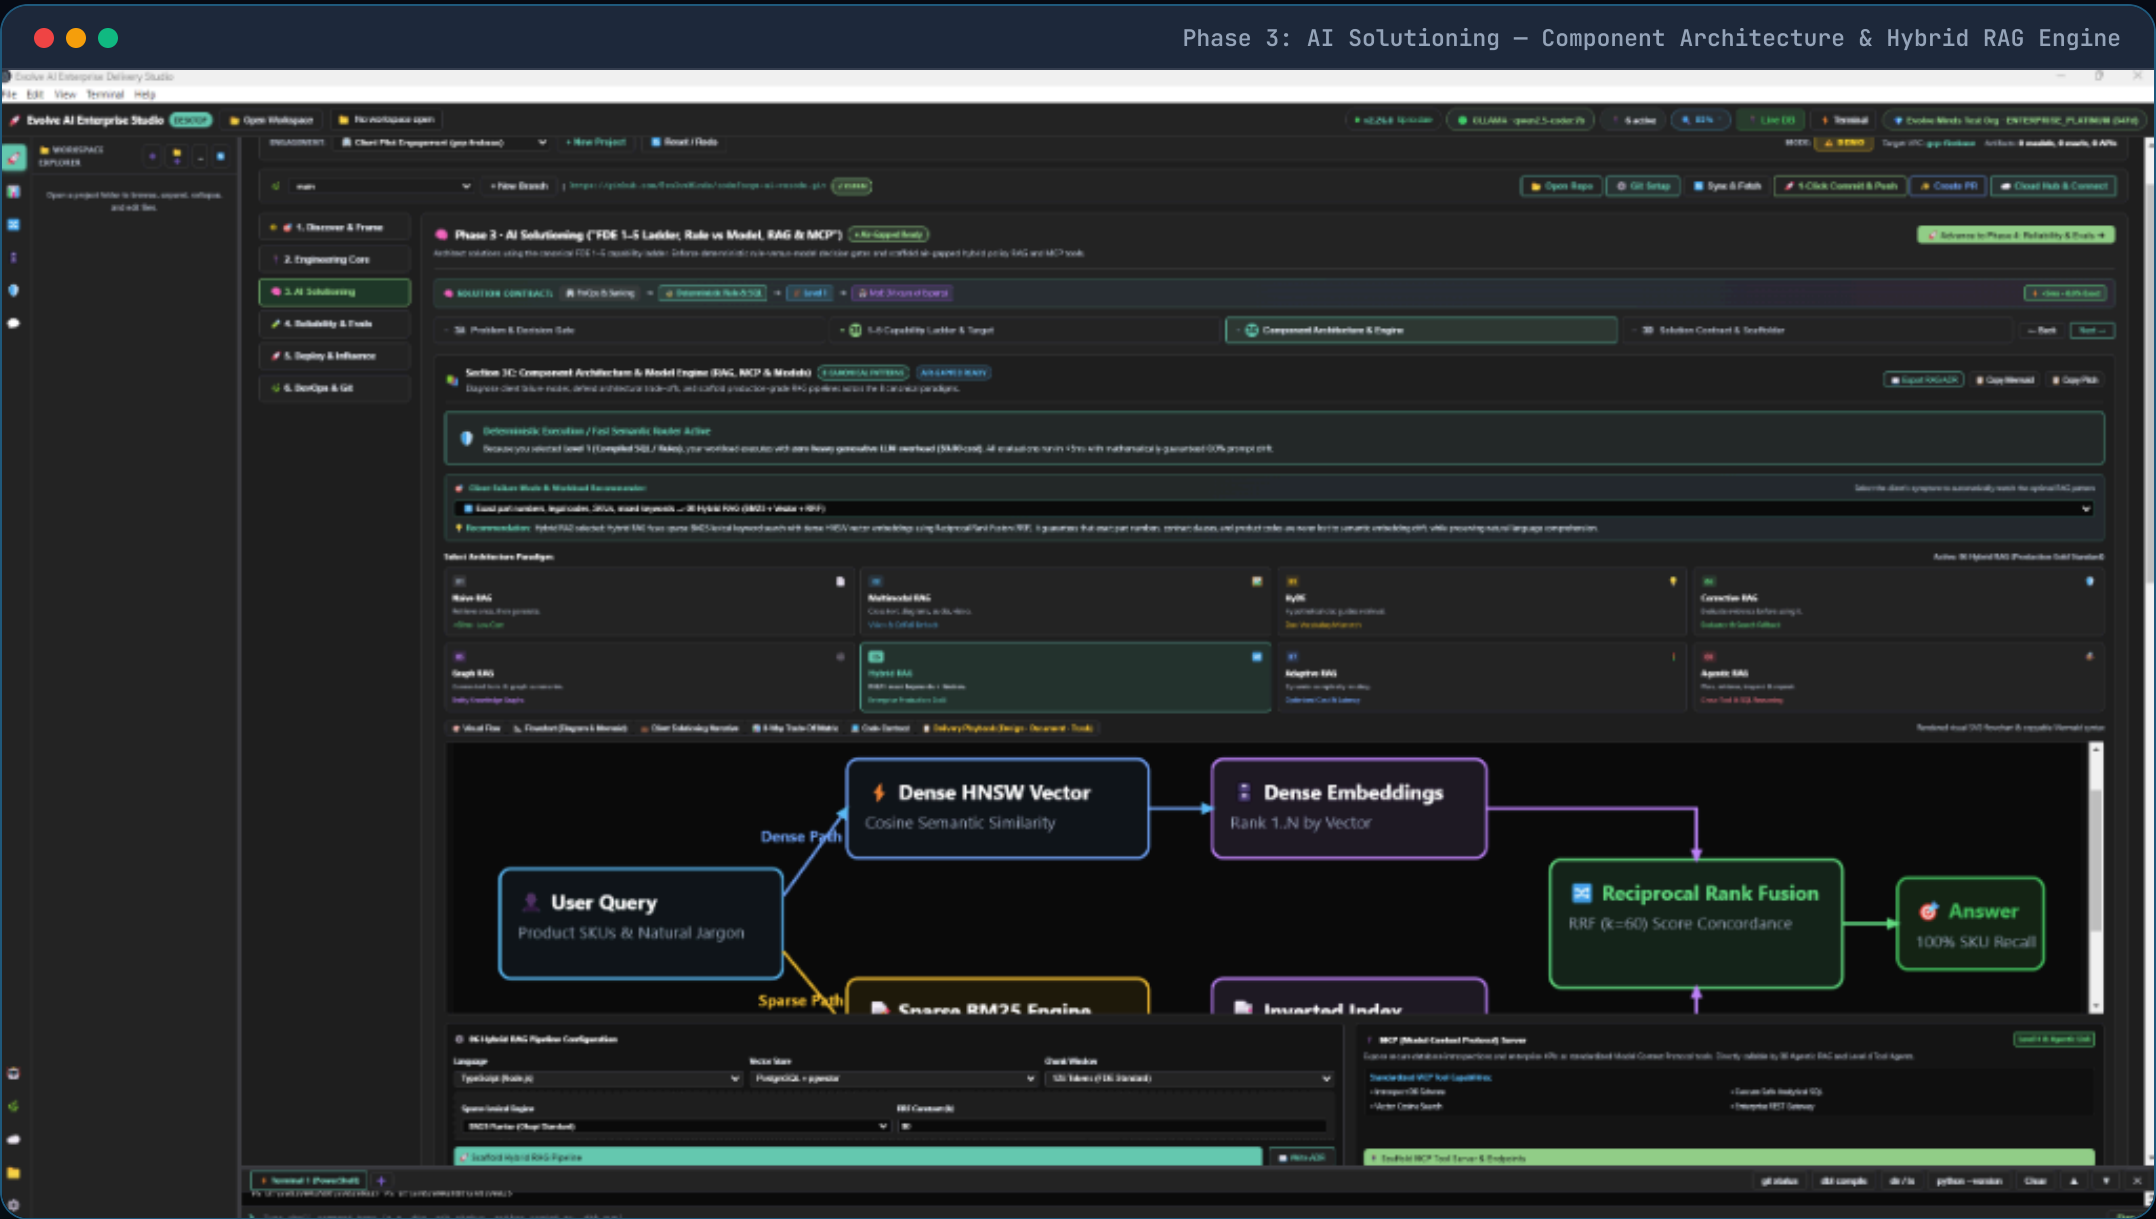

4% GHOST OPACITY

Click any connection line to dim unrelated noise to 4% blueprint ghost opacity, spotlighting joined transactional entities with glowing halos, animated photon particles, and instant ANSI SQL generation.

PHASE 3: GOVERNANCE, RAG ARCHITECTURE & CAPABILITY LADDER

AI Solutioning Contract & Hybrid RAG Engine

Enforce deterministic rule-first decision gates, architect hybrid RAG pipelines with dense vector and sparse keyword paths, and auto-scaffold MCP tool servers.

Hybrid RAG Visual Flow & Concordance

100% RECALL

Visual pipeline coupling Dense HNSW Vectors (Cosine Semantic Similarity) and Sparse BM25 Engines via Reciprocal Rank Fusion (RRF) for 100% SKU and domain jargon recall.

Rule vs. Model Decision Gate

<5ms • 0% DRIFT

Explicitly verifies "Do We Need AI?" Auto-locks target capability levels (Level 1 deterministic rules to Level 5 autonomous agents) to eliminate hallucinations and unnecessary API costs.

1-Click Code & MCP Scaffolding

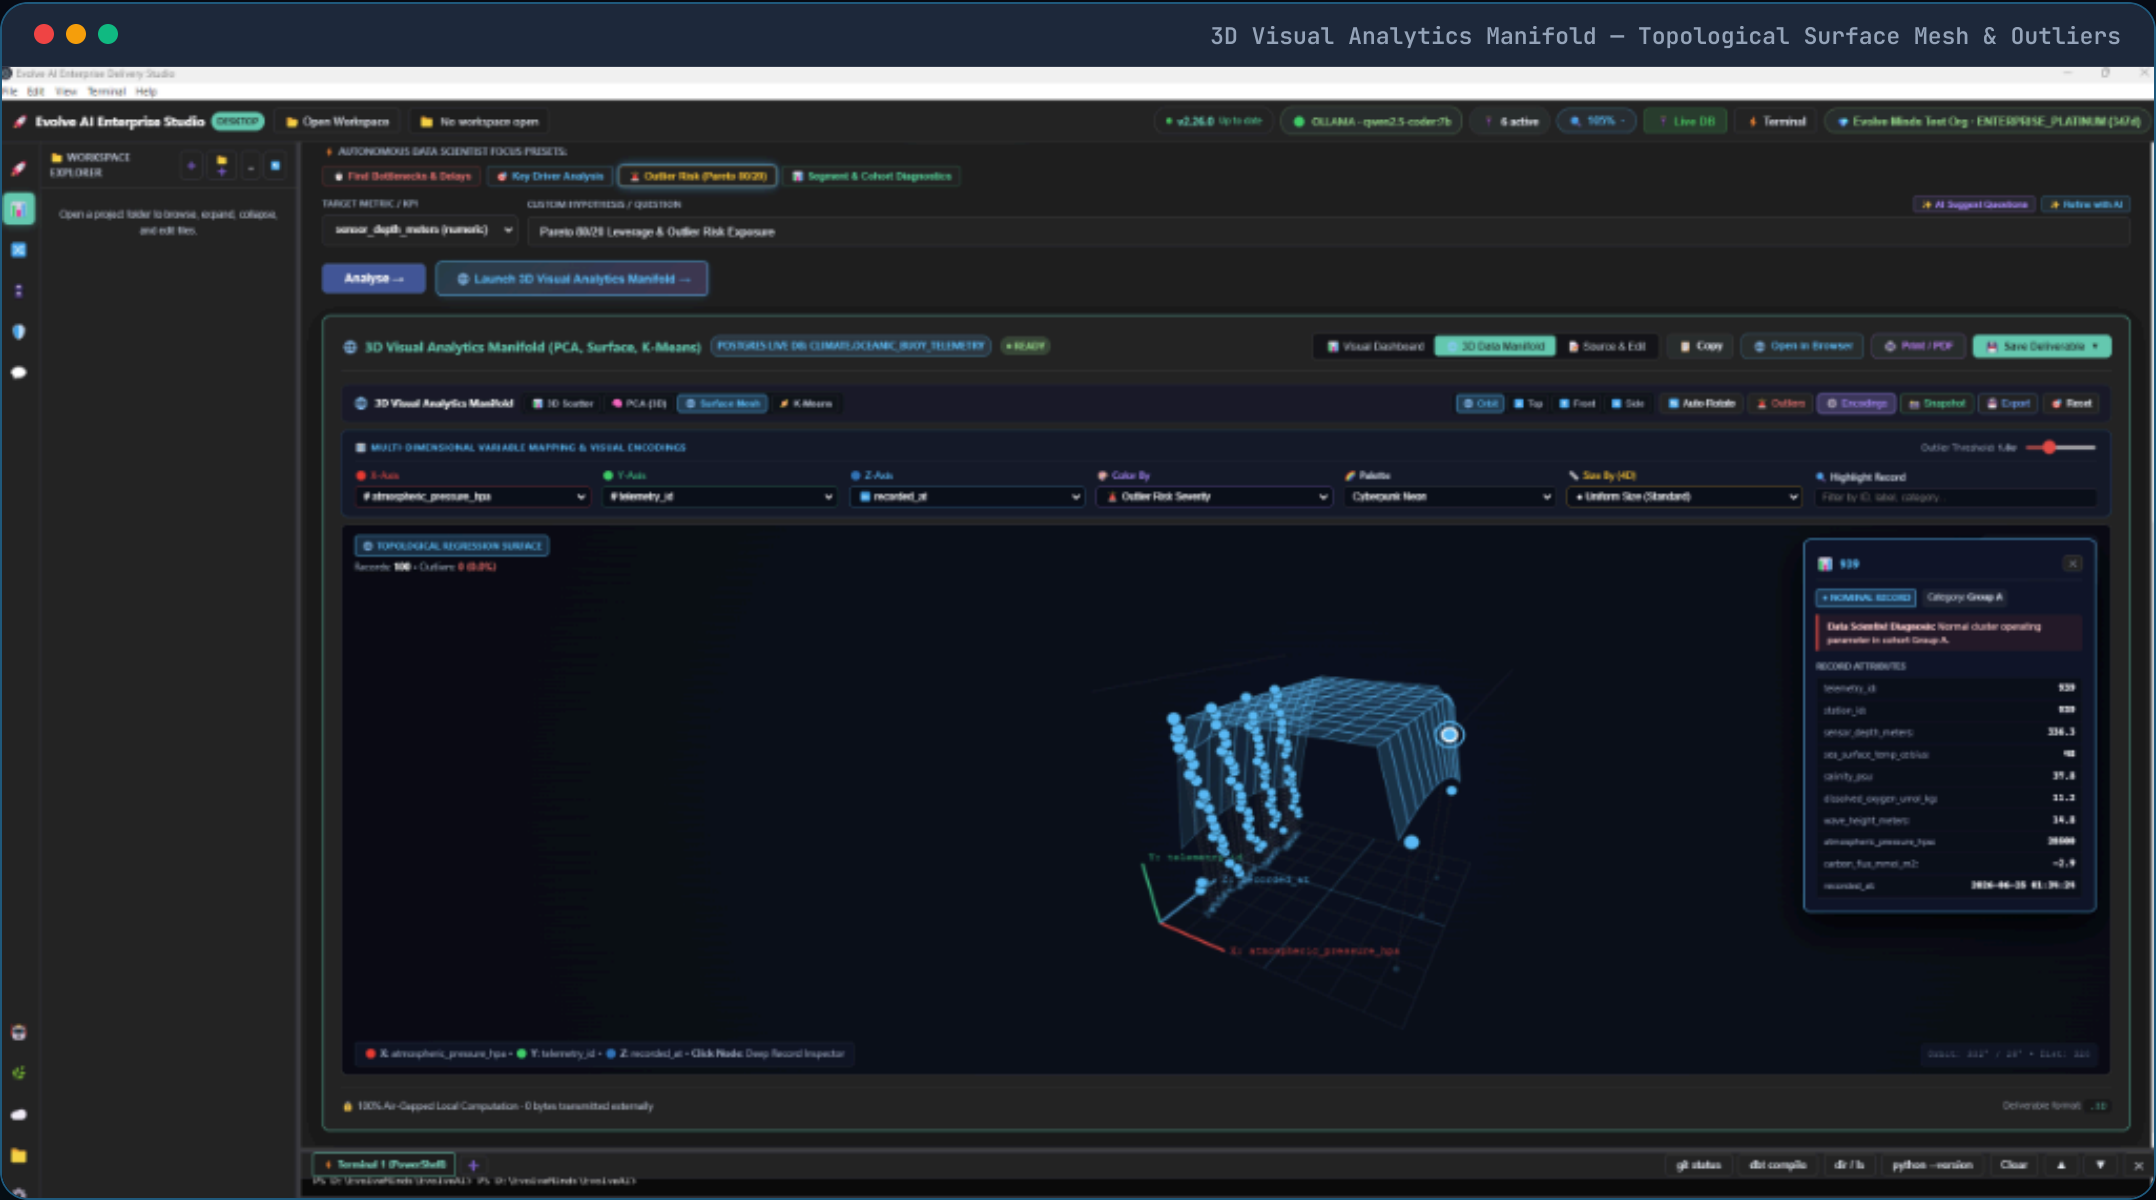

NODE / PYTHON

Instantly scaffolds production TypeScript/Python Hybrid RAG services, PostgreSQL + pgvector connectors, and standardized Model Context Protocol (MCP) tool servers.

ADVANCED 3D DATA MANIFOLD & OUTLIER DIAGNOSTICS

3D Visual Analytics Manifold & Diagnostics

Perform multi-dimensional 3D PCA, surface mesh regression, and autonomous outlier risk analysis over live enterprise database schemas with 100% air-gapped computation.

Topological Surface Mesh & PCA

3D SCATTER / MESH

Transforms complex multi-variate database tables into interactive 3D spatial manifolds (PCA, K-Means clustering, and continuous regression surface meshes) in Cyberpunk Neon palette.

Autonomous Outlier & Pareto Risk

80/20 LEVERAGE

Automated Focus Presets: Find Bottlenecks & Delays, Key Driver Analysis, and Pareto Outlier Risk. Includes floating Deep Record Inspector for instant single-record drill-downs.

100% Air-Gapped Local Computation

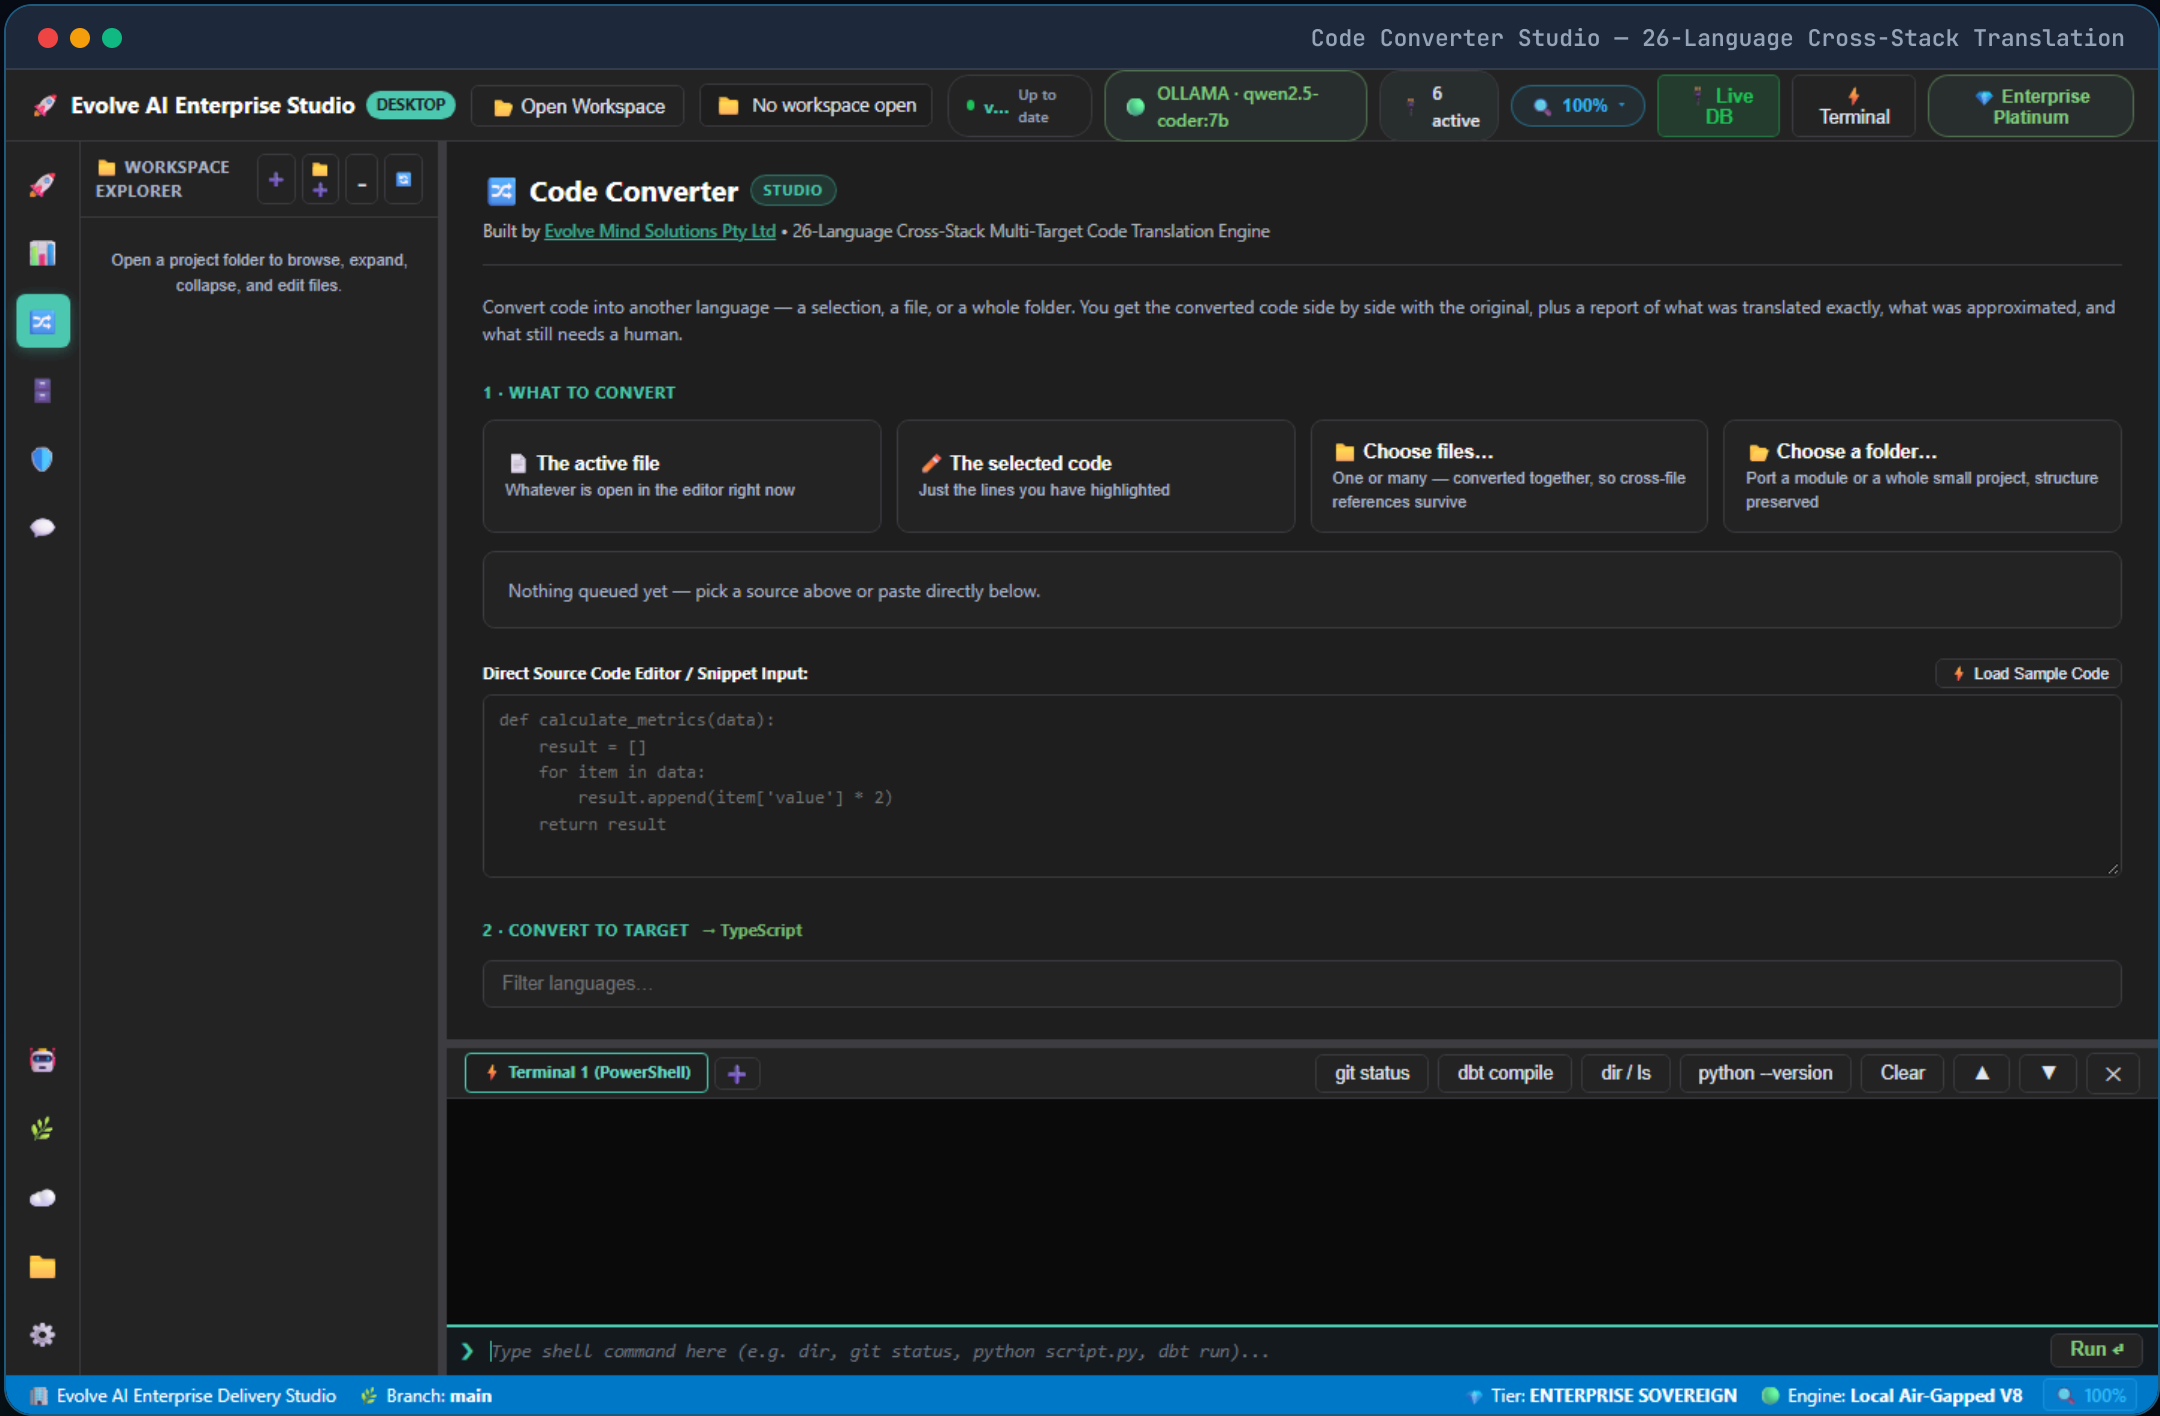

0 BYTES EXTERNALLY

All 3D transformations, matrix factorizations, and regression surfaces run locally in-memory. Zero data transmitted externally, paired with 1-click print and PDF dashboard exports.

CROSS-STACK AST IDIOM TRANSLATION

26–Language Code Modernizer & SQL Transpiler

Transpile legacy Oracle PL/SQL & T-SQL into modern Snowflake/BigQuery dbt models, and modernize backend code into cloud-native targets.

Oracle & T–SQL Transpiler

DBT MODELS

Converts complex stored procedures directly into verified Snowflake & BigQuery dbt models complete with schema validation contracts.

Real AST Idiom Translation

ZERO MOCKS

Translates code across 26 languages (COBOL, C#, Java, Python, TypeScript, Go) with real abstract syntax tree idiom mapping—no placeholder code.

Row–Level Security (RLS) Scaffolder

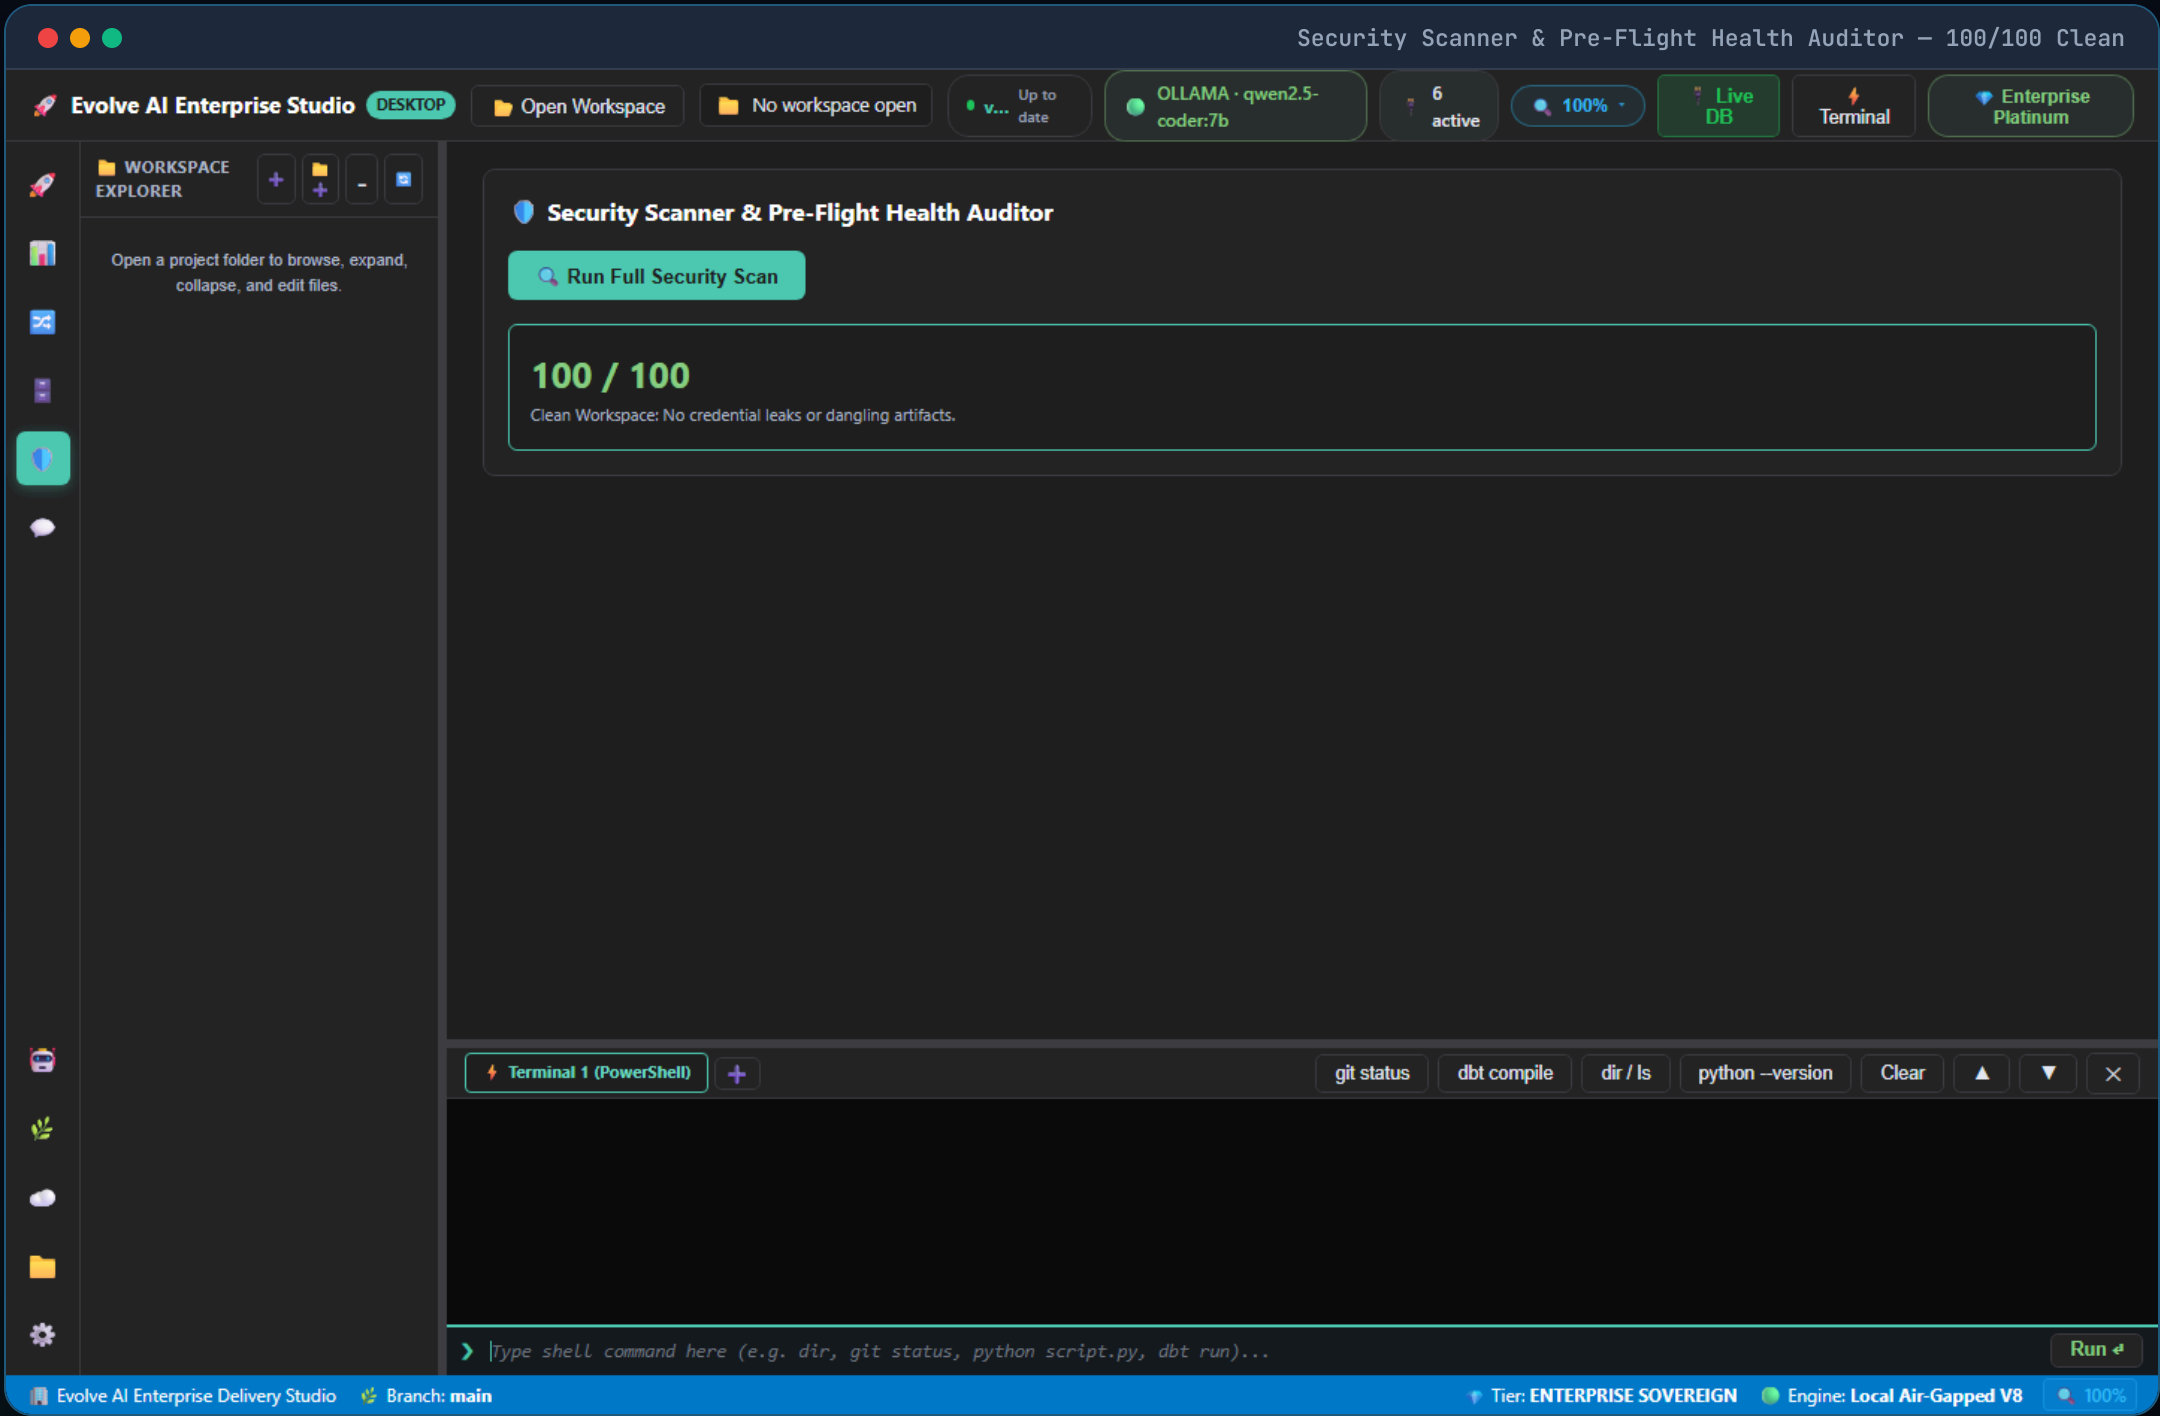

MULTI-TENANT

Generates production multi-tenant isolation and row-level security policies across Postgres, Snowflake, and BigQuery automatically.

ZERO-TRUST SOVEREIGNTY & AUDITABILITY

Pre-Flight Security Auditor & Compliance

Pre-flight secret scanning, in-flight PII masking, and cryptographic verification designed to pass strict bank and healthcare audits on Day 1.

100/100 Pre-Flight Health Auditor

ZERO LEAKS

Scans the entire project workspace for dangling API credentials, unencrypted secrets, and leftover build artifacts before client code handoff.

Offline Ed25519 Cryptographic Licensing

NODE-LOCKED

Hardware-bound asymmetric key validation with corporate email domain enforcement. Operates 100% offline with zero external license servers.

Tamper-Evident SHA-256 Receipts

AUDIT READY

Every generated deliverable and data contract carries an immutable cryptographic digest for client governance and regulatory audit trails.

DELIVERY VELOCITY AS A COMPETITIVE MOAT

The Entrepreneur Advantage: 4x Faster Client Handoff

How technical founders and agency entrepreneurs win high-compliance enterprise deals and protect delivery margins.

DELIVERY DIMENSION	TRADITIONAL CONSULTING / CUSTOM CODE	EVOLVE AI FDE DELIVERY STUDIO
Client Tooling Setup	4-8 Weeks (IT procurement & MSI tickets)	Instant (Portable .exe, Zero Admin Rights)
InfoSec & Compliance	Stalled / Blocked by Cloud SaaS Bans	Pass Day 1 (100% Air-Gapped / Local VPC)
Database & Schema Discovery	2-3 Weeks manual DDL & ERD drafting	< 15 Minutes (Live 7-DB + 2D/3D Topology)
Legacy Code / SQL Migration	Months of tedious manual SQL rewrites	Automated (Phase 5 AST Transpiler Engine)
Deliverable Packaging	Ad-hoc scripts & scattered markdown	Turnkey GitOps Repo & POC Approval Pack
Client Delivery Timeline	90-120 Days average POC cycle	< 14 Days Guaranteed Delivery

Join the Private Enterprise Pilot Program

Equip your technical delivery team with the standalone studio and test it against your client schemas.
